Follow-up report No.7

Report reference: , Reference OIE : 17315, Report Date : 06/03/2015, Country : United States of America

Report Summary

Name of sender of the report	Dr John Clifford	**Telephone**	(1-202) 799-7146
Position	Deputy Administrator	**Fax**	(1-202) 799-7146
Address	Room # 317-E Jamie L. Whitten Federal Building 1400 Independence Ave, SW Washington, DC 20250 Washington 20250	**Email**	John.Clifford@aphis.usda.gov
		Date submitted to OIE	06/03/2015

Animal type	Terrestrial	**Date of report**	06/03/2015
Disease	Highly pathogenic avian influenza	**Date of start of the event**	10/12/2014
Causal Agent	Highly pathogenic avian influenza virus	**Date of pre-confirmation of the event**	15/12/2014
Serotype(s)	H5N2	**Date of last occurrence**	2004
Reason	Reoccurrence of a listed disease	**Diagnosis**	Laboratory (advanced)
Country or zone	a zone or compartment	**Clinical signs**	Yes
Number of reported outbreaks	submitted= 26, Draft= 0

Epidemiology

Epidemiological comments
The USDA Animal and Plant Health Inspection Service (APHIS), in conjunction with State Departments of Agriculture and Wildlife, are continuing to conduct a comprehensive epidemiological investigation and enhanced surveillance (including wild bird surveillance of hunter harvested birds) in response to the HPAI H5N8 and H5N2 wild bird related events. Novel avian influenza virus of Eurasian origin (EA-H5N8 clade 2.3.4.4) spread rapidly along wild bird migratory pathways during 2014. Introduction of this EA-H5N8 virus into the Pacific Flyway sometime during 2014 has allowed mixing with North American (AM) lineage viruses and generated new combinations with genes from both EA and AM origin (or “reassortant” viruses) such as this EA/AM H5N2-reassortant detected in Canada and the US. These findings are not unexpected as the EA-H5N8 virus continues to circulate. The EA-H5 clade 2.3.4.4 viruses are highly pathogenic for poultry. On 4 March 2015, the USDA APHIS National Veterinary Services Laboratories (NVSL) confirmed HPAI EA/AM H5N2 positive results from a commercial turkey breeder replacement flock in Pope County, Minnesota. Partial HA/NA sequence is >99% similar to A/northern pintail/Washington/40964/2014 based upon direct sequence attempt from turkey swab specimen. This is the first detection of HPAI EA/AM H5N2 in Minnesota and is outside the Pacific Flyway.
Source of the outbreak(s) or origin of infection
• Contact with wild species

Measures applied

Applied	To be applied
• stamping out • quarantine • zoning • disinfection of infected premises/establishment(s)	• no planned control measures
Animals treated	**Vaccination Prohibited**
No	Yes

Diagnostic test results
