Online learning makes education accessible to veterinarians worldwide and provides the opportunity to standardize education to meet OIE guidelines. In the U.S., veterinary students use an online course entitled *Emerging and Exotic Diseases of Animals* to learn about transboundary animal diseases and as part of the required training to become “U.S. Department of Agriculture (USDA) accredited veterinarians.” The course ensures that veterinary students throughout the U.S. receive standardized education on this topic. The course is also used by veterinarians for continuing education. The USDA provided funding for development and initial delivery of a Spanish language version of the course (*Enfermedades Transfronterizas de los Animales*). The course has been used in Chile, Costa Rica, Dominican Republic, El Salvador, Guatemala, Mexico, Panama, and Peru, but funding is needed to continue to deliver the course in the future.

In the U.S., veterinarians must complete supplemental training to maintain their USDA accreditation. With USDA funding, many of these resources have been translated into Spanish and can be downloaded for training or can be edited to better address specific training needs in the Americas. As of April 2013, 14 Spanish language accreditation lessons are downloaded about 1,500 times per month. Other resources, available online at [www.cfsph.iastate.edu](http://www.cfsph.iastate.edu), include technical fact sheets for transboundary animal diseases, client handouts, annotated disease images, infection control information, and emergency response resources.

The Institute for International Cooperation in Animal Biologics (IICAB) wishes to leverage the substantial investment made to develop these online resources by translating the materials from their original English and making them broadly available for education in the Americas and elsewhere. We hope to partner with other organizations to develop and deliver veterinary educational materials that will improve Day 1 competencies and professional veterinary services in the Americas and beyond.
