OIE REFERENCE CENTRE NETWORK:
Timely dissemination of relevant scientific information and research projects

Third Global Conference of the OIE Reference Centres,
Incheon (Seoul), Korea
14 - 16 October 2014

Daniel Chaisemartin, Head, Administration,
Logistics and Publications Department,
OIE, Paris, France
To collect, analyse and disseminate global scientific veterinary information
- The network of 49 Collaborating Centres and 247 Reference Laboratories constitutes the core of the OIE’s scientific expertise.

- Your ongoing contribution to the OIE’s work ensures that the standards, guidelines, recommendations and publications are all science based.
Excellence of the network of OIE Reference Centres

• The excellence of the scientific advice has always been an OIE’s philosophy

• It was regularly highlighted as a major objective and it was reinforced in the Fifth Strategic Plan of the OIE (period 2010-2015)

• It will be certainly also an objective for the next Strategic Plan (currently in discussion) in order to meet the new scientific and technological challenges
Dissemination of information
Publications

• The Review is the principal scientific and technical publication of the OIE

Per-review process

➢ To promote research work concerning disease
➢ To publish documents to be of interest to Veterinary Services worldwide
Peer-reviewed papers for the plurithematic issue of the **Review**

The papers on this page are available online prior to being printed. They will be published in the plurithematic issue of the *Scientific and Technical Review* printed end of December each year. They have been peer-reviewed, edited, and corrected by the authors, but have not yet been formatted for printing. They are presented in their original language (for an English paper, summaries are translated into French and Spanish; for French and Spanish papers, they will be only translated in English for the printed version).

To see the contents of the article, please click on the link "Accepted article" associated to the title of the article. Once the issue is printed, please click on the link "Plurithematic issue" associated to the title of the article to see the final PDF version which is available on the online bookshop.

Dissemination of information through OIE WEB

WORLD ORGANISATION FOR ANIMAL HEALTH
Protecting animals, preserving our future

For the media
- OIE experts review current knowledge on Ebola virus disease
- Bridging WHO and OIE Tools to better control global health risks at the human-animal interface
- A new concept of “High Health, High Performance Horse”
  + View all press releases
  + Access all media resources

Highlights
Confirmation of the negligible BSE risk status of Brazil

Editorial
No more deaths from rabies

Every ten minutes someone in the world dies from rabies. This is the sad reality of the situation every day today. Every year, rabies kills nearly 70,000 people, mostly children in developing countries. Over 95% of human cases are caused by the bite of a rabies-infected dog. Yet the disease could be eliminated. Indeed, unlike many other diseases, we already have all the tools needed to eradicate it. Each new victim is therefore one too many.

Most recent issues:
- Coordinating surveillance policies in animal health and food safety ‘from farm to fork’, Vol. 32 (2), August 2013
- Plurithematic issue: peer-reviewed papers

Publications and documentation
- Online Bookshop
- Scientific and Technical Review
  + Most recent issues:
- Bulletins online (OIE Magazine): Latest issue
- Document database

Latest disease alerts
- 07.10.14: Low pathogenic avian influenza (poultry) in South Africa
- Latest news on animal diseases
- Legal basis of disease notification
- World Animal Health Information Database (WAHID)
- Disease distribution maps

OIE World Conferences
- 20-22 January 2015
  + 2015 OIE Global Conference on Aquatic Animal Health: ‘Riding the wave to the future’
The documents database contains the main OIE periodical and occasional publications. At the moment it includes about 5,000 documents and it will be updated regularly. Many are available in full text. For a detailed presentation, click here.
Use of OIE Emblem

• Guidelines for the use of the OIE Emblem

The complete name of the (relevant part of the) institution that has been designated (and its emblem) is placed in a prominent manner.

Name of the Laboratory

OIE Reference Laboratory for a disease

The title of the designation (and the OIE emblem) are discreetly placed underneath the name of the (relevant part of the) institution, in a smaller font.
Conclusions

• The excellence of the scientific advice is always an OIE’s philosophy

• It is very important for the Reference Centres but also for the OIE and its Member Countries to meet new scientific and technological challenges

• More quickly we could give or send new information on new disease control methods and all topics of interest for the Veterinary Services, better will be the use of these informations

• Technology watch and report in timely manner is a Win – Win process: network and OIE Reference centres better recognised; OIE and Member Countries better informed and better prepared for the control of diseases
Thank you for your attention!
