African swine fever (ASF) is not a danger to humans but kills domestic and wild pigs. There is no vaccine against it.

The virus is highly resistant in the environment and in pork products.

Carelessness can spread the disease.

### Respect general PRECAUTIONS

- **Declare any suspicious case (dead or alive) to the Veterinary Services**
- **Do not carry pigs or pork products.** If you do, declare them to the authorities
- **When working in or visiting farms, respect biosecurity measures**
- **Do not visit pig farms in affected areas**

### COMMERCIAL PIG FARMS

Reinforce your biosecurity measures on your farm.

### PIG FARMERS

Take measures in your backyard and at the market, to protect your pigs and your neighbours’ pigs from the risk of ASF.

### HUNTERS

During hunting trips, especially in places considered at risk of ASF, make sure you disinfect your equipment before leaving the hunting area.

### TRAVELLERS

Do not carry the ASF virus by transporting pigs or carrying pork products.

### TRANSPORT AUTHORITIES AND CHECK POINT STAFF (airports, harbours, rail stations, highways)

Know the countries infected with ASF and systematically check for travellers carrying animals or animal products, in particular pigs or pork products.
