Epidemiology

Epidemiological comments

All flocks are backyard flocks with few chickens. No trading activities.

Cleaning and disinfection finished on 26 December 2007 for the last case. Since that time, there have not been any more cases of highly pathogenic avian influenza in Germany. Germany declares itself as free from highly pathogenic avian influenza in poultry as of 26 March 2008.

Vaccination is prohibited for poultry, only zoo birds may be vaccinated after permission by the competent authority.

Source of the outbreak(s) or origin of infection • Unknown or inconclusive

Control Measures

Applied	<ul style="list-style-type: none"> • Control of wildlife reservoirs • Stamping out • Movement control inside the country • Screening • Zoning • Disinfection of infected premises/establishment(s) 	To be applied	• No Planned Control Measures
		Vaccination Prohibited	Yes
Animals treated	No		

Country / Zone

Country or zone a zone or compartment

Diagnostic test results
