

Follow-up report No.: 2

Report reference: , OIE Ref: 7639, Report Date: 29/12/2008, Country: Laos

Report Summary

Disease	Highly pathogenic avian influenza	Animal type	Terrestrial
Causal Agent	Highly pathogenic avian influenza virus	Serotype(s)	H5N1
Clinical Signs	Yes	Reason	Reoccurrence of a listed disease
Date of first confirmation of the event	04/09/2008	Date of Start of Event	27/08/2008
Date of report	29/12/2008	Date Submitted To OIE	29/12/2008
Diagnosis	Suspicion, Clinical, Laboratory (advanced), Necropsy	Date Of Last Occurrence	02/2008
Number Of Reported Outbreaks	Submitted= 3, Draft= 0	Name of Sender of the report	Dr Khambounheuang Bounkhouang
Address	- Vientiane P.O. Box 811	Position	Directeur Général
Telephone	(856-21) 416 932-415 674	Fax	(856-21) 415 674
Email	dlf.maf@laopdr.com	Entered by	Dr Khambounheuang Bounkhouang

Outbreak (other report - submitted)

Province	District	Sub-district	Unit Type	Location	Latitude	Longitude	Start date	End Date
LUANGPRABANG	Nambak	Fa village	Village	Fa village	20,3732	102,2722	27/08/2008	29/12/2008
Species	Measuring units	Susceptible	Cases	Deaths	Destroyed	Slaughtered		
Birds	Animals	5422	247	197	5225	0		
Affected Population								
Ducklings in a small commercial unit within a village with backyard poultry. They were purchased on 20 August 2008 and started to die on 27 August 2008 (about 4% and then increasing to 10% per day). Farmer reported it to the district officer on 1 September. Samples were confirmed to be positive for HPAI H5N1 on 4 September 2008. The declaration of the CVO and the provincial governor was made on 5 September 2008. The infected flock was culled on 4 September 2008 and culling within the 1-Km-radius zone around the control zone started on 5 September 2008. Culling was presumably completed on 12 September 2008 (backyard poultry). Legal purchase and movement from a farm in other province where illegal import is suspected. Investigation on that farm is on-going.								

Outbreak (other report - submitted)

Province	District	Sub-district	Unit Type	Location	Latitude	Longitude	Start date	End Date
OUDOMXAY	Xay	Nalae village	Village	Nalae village	20,4035	101,5803	01/09/2008	29/12/2008
Species	Measuring units	Susceptible	Cases	Deaths	Destroyed	Slaughtered		
Birds	Animals	1170	23	23		
Affected Population								
The positive flock was discovered due to back tracing from Nambak outbreak. A surveillance zone of 5-Km-radius was drawn around the suspected farm in Oudomxay, from where the positive ducklings in Nambak originated, even though no positive animals were found on that farm. Very low daily mortality (2%) was reported during disease investigation in one flock in Nalae village. This flock also originated from the same farm. Animals originated from the same farm as infected Nambak flock.								

Outbreak (other report - submitted)

Province	District	Unit Type	Location	Latitude	Longitude	Start date	End Date
XAYABURY	Xayabury	Village	Donmai village	19,4157	101,589	27/10/2008	29/12/2008
Species	Measuring units	Susceptible	Cases	Deaths	Destroyed	Slaughtered	
Birds	Animals	155	11	11	144	0	
Affected Population		backyard poultry (114 chickens and 41 ducks)					

Outbreak summary: Total outbreaks = 3 (Submitted)

Species	Susceptible	Cases	Deaths	Destroyed	Slaughtered
Birds	6747	281	231	5369	0
