</table>

Affected Population: Cage layer hens aged 45-84 weeks

Epidemiological comments

Final surveillance of sentinel and restocker birds completed with negative results.

All other surveillance also remains negative.

Ongoing surveillance will occur on poultry or wild birds with signs consistent with potential avian influenza.

Source of the outbreak(s) or origin of infection

• Contact with wild species

Measures applied

Applied: To be applied
**Applied**
- stamping out
- quarantine
- movement control inside the country
- screening
- zoning
- disinfection of infected premises/establishment(s)

**To be applied**
- no planned control measures

**Animals treated**
- No

**Vaccination Prohibited**
- Yes

**Future Reporting**
The event is continuing. Weekly follow-up reports will be submitted.
