### Animal type

- Terrestrial

### Disease

- Highly pathogenic avian influenza

### Causal Agent

- Highly pathogenic avian influenza virus

### Serotype(s)

- H5N8

### Reason

- Reoccurrence of a listed disease

### Diagnosis

- Clinical, Laboratory (basic), Laboratory (advanced), Necropsy

### Country or zone

- the whole country

### Date of report

- 02/05/2014

### Date of start of the event

- 11/04/2014

### Date of pre-confirmation of the event

- 13/04/2014

### Date of last occurrence

- 25/03/2011

### Clinical signs

- Yes

### Number of reported outbreaks

- submitted = 1, Draft = 0

### Outbreak details

- KUMAMOTO-other report - submitted
- Birds - Animals - 113100 - 1100 - 1100 - 112000 - 0

### Affected Population

- poultry (broiler)

### Outbreak summary: Total outbreaks = 1 (Submitted)

- Species
  - Birds - 113100
  - Susceptible - Cases - Deaths - Destroyed - Slaughtered

### Epidemiology

#### Epidemiological comments

On 1 May, shipping restrictions (3-10km radius around the affected farm and the related farm) were lifted since the second confirmation tests of all the farms within the movement restriction zones (3km radius around the affected farm and the related farm) proved that they are free from avian influenza virus. The confirmation tests were conducted by clinical inspection, serum antibody test and virus isolation.

#### Source of the outbreak(s) or origin of infection

- • Unknown or inconclusive

### Measures applied

#### Applied

- control of wildlife reservoirs
- stamping out
- quarantine
- movement control inside the country
- screening
- disinfection of infected premises/establishment(s)

#### Animals treated

- Vaccination Prohibited

#### To be applied

- no planned control measures

### Future Reporting

- The event is continuing. Weekly follow-up reports will be submitted.
