**Position**

- Vice President

**Address**

- No.1, Lane 51, Dahu Rd., Xiangshan Dist. Hsinchu City 300

**Date submitted to OIE**

- 11/01/2015

**Animal type**

- Terrestrial

**Disease**

- Highly pathogenic avian influenza

**Causal Agent**

- Highly pathogenic avian influenza virus

**Serotype(s)**

- H5N8

**Reason**

- Reoccurrence of a listed disease

**Country or zone**

- a zone or compartment

**Clinical signs**

- Yes

**Number of outbreaks**

- submitted= 1, Draft= 0

**Outbreaks summary:** Total outbreaks = 1 (Submitted)

**Affected Population**

- Breeding geese

**Epidemiology**

**Epidemiological comments**

Abnormal mortality was noticed and reported to the local disease control center by the owner of the breeding goose farm. Two dead geese were taken from the farm for diagnosis and the farm has been put under movement restrictions since then.

Specific RNA product of avian influenza virus was detected and subtyped as H5N8 by RT-PCR. Highly pathogenic avian influenza was confirmed by the National Laboratory based on sequencing analysis of HA0 cleavage site. All the geese on the infected farm will be culled. The actual number of culled geese will be available when stamping out will finish and be reported in the next follow-up report. Thorough cleaning and disinfection will be conducted after stamping out operation. Surrounding poultry farms within a 3 km radius of the infected farm are under intensified surveillance for 3 months.

**Source of the outbreak(s) or origin of infection**

- Unknown or inconclusive

**Measures applied**

- stamping out
- quarantine
- movement control inside the country
- screening
- zoning
- disinfection of infected premises/establishment(s)

**Animals treated**

- Vaccination Prohibited

**Diagnostic test results**
