Epidemiology

Epidemiological comments

Japan declares to have regained its free status from avian influenza in poultry with effect from 28 June 2017 according to the Article 10.4.3 of the OIE Terrestrial Animal Health Code. As specified in the Article 10.4.3, a stamping-out policy, including the destruction of all susceptible animals and the disinfection of the affected farms, was applied and all the control measures were completed on 27 March. Active surveillance with the confirmation tests to prove freedom from avian influenza were conducted by clinical inspection, serum antibody test and virus isolation, and the three-month period has passed since the application of a stamping-out policy, without any new outbreaks (including disinfection of all affected establishments).

Source of the outbreak(s) or origin of infection

• Unknown or inconclusive
