

**ASF SITUATION**

The presence of ASF is notified to the OIE by its Members through the Six-monthly reports (as sufficiently stable) or through Immediate Notifications (IN's) and Follow-up reports (FUR's), when considered as an exceptional event. Between 2018 and the first semester of 2019, this disease was notified through six-monthly reports in 3 countries in Europe (Estonia, Italy and Lithuania) and 23 countries in Africa<sup>1</sup>. South Africa and Zambia notified the disease in 2018 through the Six-monthly reports and through IN and FUR's. This report presents an overview of the events notified through the OIE's Early Warning System (EWS) by means of IN and FUR's. This information is publicly available<sup>2</sup>. A classification of the affected population (by wild boar, backyard and farm swine) was made considering their different roles in the epidemiology of the disease.

**1. Spatial distribution**

**2. Impact of the disease**

Figure 1. ASF outbreaks reported through the Early Warning system within the period. The outbreaks notified between January 4 and 16 are pointed with a higher color intensity compared to the ongoing outbreaks (lighter colors).

A total of 64,446 animals were notified as losses (3,118 losses notified in the Report N°34). In Europe, Bulgaria notified 63,987 losses. In this period, neither in Asia nor in Africa losses were notified.

Figure 2. Losses\* due to ASF outbreaks notified through WAHIS within the period (January 04-16, 2019)

The impact of this disease is measured in terms of losses\*, which are calculated by the sum of dead and culled animals from the infected farm or backyard premises of the reported outbreak.

**3. Changes in the epidemiological situation**

**Countries/Territories with new or ongoing outbreaks in the current period:** 22 Countries/Territories notified new or ongoing outbreaks through immediate notifications and follow-up reports, 10 in Europe (Belgium, Bulgaria, Hungary, Latvia, Moldova, Poland, Romania, Russia, Slovakia and Ukraine); 9 in Asia (China (People's Republic of), Indonesia, Korea (Democratic People's Republic of), Korea (Republic of), Laos, Philippines, Russia, Timor-Leste and Vietnam) and 4 in Africa (Cote D'Ivoire, Kenya, South Africa and Zimbabwe).

**NOTE:** Russia is mentioned in Asia and Europe, depending on the location of the outbreaks.

**Asia**  
Myanmar closed their four ongoing outbreaks on December the 27<sup>th</sup>, thus resolving the event in the country. Russia and Korea, (Rep. of) notified new outbreaks in wild boar.

**Europe**  
 In Europe, 217 outbreaks were notified; 40 in swine and 177 in wild boar. In this region, a targeted surveillance program is continuing. Often, a single case in wild boar is notified as a single outbreak, and is usually notified as resolved immediately. From the outbreaks reported in wild boar within this period, 60 remain ongoing in wild boar and 40 in swine.

**Africa**  
 In this period, no new outbreaks were notified.

In this period, 199 new outbreaks were notified. The total of ongoing ASF outbreaks worldwide is now 11,150 (7,105 outbreaks in Vietnam, 3,113 outbreaks in Romania). In the previous report, 241 were notified as new, while 12,219 outbreaks were ongoing.

Member Countries are reminded that the OIE *Terrestrial Animal Health Code* provides comprehensive guidance to Veterinary Authorities for establishing a country, zone and compartment free of African swine fever (ASF) as well as recommendations relating to the trade of pork and pork products. These products, when handled in accordance with hygienic practices complying with international standards, should not present a risk of infection.

The OIE also encourages Member Countries to implement enhanced national sanitary measures on waste disposal from aircrafts/vessels/passengers and enhanced on-farm biosecurity measures – including the protection of pigs from untreated swill feeding and the effective separation between domestic pigs and wild boar – and stresses the importance of OIE international standards for risk management of transboundary animal diseases (TADs) to reduce the risk of exporting disease to trading partners.

For an overview on the historical distribution of the disease since 2016, please refer to the ASF report N° 1 (available in the official website of the OIE)

A summary of all Immediate Notifications and Follow-up reports submitted by countries in Asia and the Pacific updated in a weekly basis is available in the Region's [official webpage](#).
