African Swine Fever (ASF)
Report N° 34: December 20, 2019 to January 03, 2020
World Animal Health Information and Analysis Department

ASF SITUATION

The presence of ASF is notified to the OIE by its Members through the Six-monthly reports (as sufficiently stable) or through Immediate Notifications (IN’s) and Follow-up reports (FUR’s), when considered as an exceptional event. Between 2018 and the first semester of 2019, this disease was notified through Six-monthly reports in 3 countries in Europe (Estonia, Italy and Lithuania) and 23 countries in Africa1. South Africa and Zambia notified the disease in 2018 through the Six-monthly reports and through IN and FUR’s. This report presents an overview of the events notified through the OIE’s Early Warning System (EWS) by means of IN and FUR’s. This information is publicly available 2. A classification of the affected population (by wild boar, backyard and farm swine) was made considering their different roles in the epidemiology of the disease.

1. Spatial distribution

![ASF outbreaks reported through the Early Warning system within the period. The outbreaks notified between December 20 and January 3 are pointed with a higher color intensity compared to the ongoing outbreaks (lighter colors).](image)

![Outbreaks reported 20/12 - 03/01](image)

Outbreaks reported 20/12 - 03/01
- Backyard
- Farm
- Wild boar

![Ongoing outbreaks](image)

Ongoing outbreaks
- Backyard
- Farm
- Wild boar

In this period, 241 new outbreaks were notified. The total of ongoing ASF outbreaks worldwide is now 12,219 (8,273 outbreaks in Vietnam, 3,034 outbreaks in Romania). In the previous report, 1,013 were notified as new, while 12,233 outbreaks were ongoing.

2. Impact of the disease

A total of 3,116 animals were notified as losses (31,224 losses notified in the Report N° 33). In Asia, all animal losses were notified in China. The 2,683 losses in Europe were notified in Bulgaria (49) and Romania (2,635). No losses were reported in Africa within the period.

![Figure 2. Losses* due to ASF outbreaks notified through WAHIS within the period (December 20 – January 03, 2019)](image)

The impact of this disease is measured in terms of losses*, which are calculated by the sum of dead and culled animals from the infected farm or backyard premises of the reported outbreak.

3. Changes in the epidemiological situation

Countries/Territories with new or ongoing outbreaks in the current period: 23 Countries/Territories notified new or ongoing outbreaks through immediate notifications and follow-up reports, 9 in Europe (Bulgaria, Hungary, Latvia, Moldova, Poland, Romania, Russia, Slovakia and Ukraine); 10 in Asia (China (People’s Republic of), Indonesia, Korea (Democratic People’s Republic of), Korea (Republic of), Laos, Myanmar, Philippines, Russia, Timor-Leste and Vietnam) and 4 in Africa (Côte D’Ivoire, Kenya, South Africa and Zimbabwe).

NOTE: Russia is mentioned in Asia and Europe, depending on the location of the outbreaks.

Asia
- China reported one outbreak in Sichuan (detected in a checkpoint for animal health supervision).
- Korea (Rep. of) notified 6 outbreaks in wild boar.
- Russia notified an outbreak in Primorski Kray affecting backyard swine.

Europe
- Serbia closed all ongoing outbreaks in the country and notified the ASF event as resolved on December 20.
- In Europe, 239 outbreaks were notified; 19 in swine and 220 in wild boar. In this region, a targeted surveillance program is continuing. Often, a single case in wild boar is notified as a single outbreak, and is usually notified as resolved immediately. From the outbreaks reported in wild boar within this period, 18 remain ongoing in wild boar and 16 in swine.

Africa
- In this period, no new outbreaks were notified.

Member Countries are reminded that the OIE Terrestrial Animal Health Code provides comprehensive guidance to Veterinary Authorities for establishing a country, zone and compartment free of African swine fever (ASF) as well as recommendations relating to the trade of pork and pork products. These products, when handled in accordance with hygienic practices complying with international standards, should not present a risk of infection.

The OIE also encourages Member Countries to implement enhanced national sanitary measures on waste disposal from aircrafts/vessels/passengers and enhanced on-farm biosecurity measures – including the protection of pigs from untreated stall feeding and the effective separation between domestic pigs and wild boar – and stresses the importance of OIE international standards for risk management of transboundary animal diseases (TADs) to reduce the risk of exporting disease to trading partners.

For an overview on the historical distribution of the disease since 2016, please refer to the ASF report N° 1 (available in the official website of the OIE).

A summary of all Immediate Notifications and Follow-up reports submitted by countries in Asia and the Pacific updated in a weekly basis is available in the Region’s official webpage.
