The OIE responds to global challenges

Human health, food security, biodiversity, and in addition to improving animal health and welfare, Veterinary Services contribute to our society in many other ways. The OIE accompanies their efforts every day.

**People’s livelihoods**

- **Eradicating peste des petits ruminants**
  
  The spread of peste des petits ruminants (PPR) has accelerated alarmingly over the last 15 years. It threatens the food security and livelihoods of 300 million rural families around the world, many of which are small-scale farmers and nomadic pastoralists. Global annual losses due to this disease are estimated at between $1.4 billion and $2.1 billion. The OIE is taking action to eradicate PPR by 2030, as part of the OIE/FAO Global Strategy.

  - **In 2019**
    
    - 6 PVS evaluation missions focused on PPR
    - 10.1M doses of vaccine delivered through the OIE Vaccine Bank
      
      Funding: European Union, France, Italy, United Kingdom, the World Bank
    - 7 training courses held regionally for Veterinary Services

- **Access to education**

  The work of veterinary paraprofessionals (VPPs) is essential to animal health, particularly in countries where there are not enough veterinarians and they are not evenly distributed throughout the country. The accessibility and quality of their training, as well as the level of recognition of their status, vary from one country to another. The OIE works to improve the quality of Veterinary Services education throughout the world, especially the training of paraprofessionals. In this way, it also helps to provide job opportunities for the younger generations.

  - **In 2019**
    
    - 4 projects developed to train VPPs (3 concluded and 1 in progress)
    - 10 twinning projects between Veterinary Education Establishments in 2019
      
      Funding: Australia, Bill & Melinda Gates Foundation, European Union, France, Germany, Italy, Japan, New Zealand, United Kingdom, United States of America, the World Bank

- **Veterinary Services training**

  - **In 2019**
    
    - The Expert Group on VPPs concluded its 3-year work cycle with the publication of guidelines for the education of VPPs

**Our involvement in 3 examples**

**Fighting rabies**

The OIE project to control rabies in Namibia was launched in mid-2015, shortly after the launch of the National Disease Control Strategy. Initially intended to last for three years, the project was carried out in the Northern Communal Area, where 93% of the country’s rabies cases were concentrated. Its goal: to increase the number of dogs vaccinated and raise awareness among the population to eliminate this disease, which still causes so many human deaths. The pilot phase, carried out in the Oshana region in 2016, was extended to seven neighbouring administrative regions from 2017. The project was renewed in 2019 for a further three years. The lessons learned will contribute to better control rabies in southern Africa.

- **Between 2016 and 2019**
  
  - 228,000+ dogs vaccinated through the OIE Vaccine Bank deliveries
  - 539 animal health professionals trained in vaccination
    
    Funding: Germany
  
  - 67,300+ children taught about rabies in 242 schools

**Our action...**

- **Communicating and informing**
  
  with full transparency

- **Controlling global health risks**

- **Strengthening resilience in animal health systems**

**... contributes to the achievement of at least 13 of the Sustainable Development Goals**
