The avian influenza crisis has focused the attention of the international community over several years now, disclosing alternatively scientific, economic and political issues.

The G8 Summit held in July 2006, surveillance and monitoring of infectious animal diseases and zoonoses was supported and encouraged by world leaders, along with the need to strengthen Veterinary Services worldwide, build up laboratory capacities and capabilities, share virus strain samples between countries and focus on work with relevant international organisations in the mitigation of animal and public health emergencies.

Sharing virus strains, samples and sequences is a critical part of the global work on the surveillance and control of infectious diseases including avian influenza. The joint World Organisation for Animal Health (OIE)/Food and Agriculture Organization (FAO) of the United Nations, worldwide scientific network for the control of avian influenza (OFFLU), has been established precisely with a priority objective of improving the knowledge, following up and sharing of H5N1 virus strains between human health and animal health laboratories and OIE/FAO reference laboratories worldwide, promoting gene sequencing and publishing the gene sequences in public data bases.

In a world in which outbreaks of zoonotic diseases can cause considerable economic and social disruption, affect the animal kingdom while causing threats to public health I consider that it is our duty to support and strengthen Networks such as OFFLU...

Laboratories in charge of the human side of influenza pandemic preparedness, under the guidance of the World Health Organization (WHO), and veterinary laboratories working in the OFFLU framework also work together through a WHO/ OIE-FAO interface mechanism.

In April 2005, the OIE with the FAO created OFFLU and strongly supported its activities ever since, pointing out the importance for human medical research to have a timely access to the animal strains of the virus in order to prepare on time the most efficient vaccines for humans.

Through an active and permanent cooperation, OFFLU develops and harmonises scientific activities in all continents and provides a pro-active approach in providing support to infected and at risk countries to protect themselves.

OFFLU is also a precious source of scientific expertise. It maintains a database of experts recognised for their excellence who may be able for consultancy missions to respond to the needs of countries and the FAO/OIE Crisis Management Centre which holds the operational responsibility of managing missions. However, some specific issues on laboratory and scientific expertise may be carried out directly by the Network.

To allow OFFLU to carry out its activities properly, appropriate international funding is needed. Since the very beginning of the avian influenza crisis, the OIE alerted the international community about the need to control the virus at animal source and that national and global resources should be allocated to this end as a priority. As an essential component of the monitoring and...
Then, they will be sent to the US National Institute for Health for sequencing and deposited in full transparency on the free-access database, GenBank.

In a world in which outbreaks of zoonotic diseases can cause considerable economic and social disruption, affect the animal kingdom while causing threats to public health I consider that it is our duty to support and strengthen Networks such as OFFLU in order to promote exchange of information on diagnostic and research programmes in laboratories and epidemiology research centres, and thus contributing in the control and eradication of Avian Influenza worldwide.

As an essential component of the monitoring and control of the virus in animals, OFFLU must be part of this funding process decided at the Beijing Conference in January 2006.

OFFLU clearly became an International Public Good.

Bernard Vallat
Director General, OIE
Introduction
This fourth animal welfare update is designed to maintain awareness of progress with OIE activities involving animal welfare and is part of the OIE’s commitment to communication and consultation, which are vital elements of the OIE Animal Welfare mission statement:

‘To provide international leadership in animal welfare through the development of science-based standards, and guidelines, the provision of expert advice and the promotion of relevant education and research.’

This update includes feedback from the fifth meeting of the Permanent Animal Welfare Working Group and a report from Ms Sonja Rosic-Banjanin, who was a trainee at the OIE in July/August 2006.

In August 2006, Dr Sarah Kahn took over from Dr David Wilson as Head of the OIE International Trade Department. This position is critical to the OIE work in animal welfare. Dr Wilson is thanked for his most valuable contribution over a three-year period and Dr Kahn is welcomed to her new role. In September 2006, Dr Leopoldo Stuardo took over the position previously held by Dr Julio Pinto. The Animal Welfare Working Group looks forward to working with both Dr Kahn and Dr Stuardo.

Working Group Meeting
The OIE Animal Welfare Working Group held its fifth meeting from 4-6 July 2006 at OIE Headquarters in Paris.

For the second time, this annual meeting was attended by a representative of non-governmental organisations and, in an observer capacity, by representatives of the International Meat Secretariat (IMS), the International Dairy Federation (IDF) and the International Federation of Agricultural Producers (IFAP). The Working Group had the opportunity to discuss a number of issues face to face with the Director General, Dr Vallat, who commented very positively on the Working Group’s achievements and future direction.

The Working Group reviewed the four sets of guidelines adopted at the May 2005 OIE General Session, taking into account outstanding submissions received. These revisions will be available for member country consultation prior to the 2007 General Session.

The meeting also covered the following areas:
– Housing and production standards. Animal protection, rather than animal welfare promotion, is the strategic priority for many of the developing or transition OIE member countries. The Director General noted that extensive farming, without housing, is the norm for the most economically important species in many of these countries.
– The stray dog control ad hoc group will review and amend its report. Group membership will be revised to include veterinary services management experience. With c. 50,000 people dying worldwide each year from dog-transmitted rabies, this work and associated liaison with WHO is a high priority.
– Development of guidelines on aquatic animal welfare and discussion on draft guidelines for slaughter of crustaceans for human consumption and humane killing of crustaceans for disease control purposes.
– The October 2006 OIE meeting with the International Council for Laboratory Animal Science (ICLAS) and associated organisations.

The European Commission has proposed a follow up to the 2004 Global Conference on Animal Welfare. With support from the Director General, it was recommended that the conference be held, preferably in a developing country, in 2008.
Veterinary Student Perspective of the OIE Animal Welfare Initiative
Sonja Rosic-Banjanin, DVM Candidate 2008, Ontario Veterinary College, Guelph, Canada

The Central Bureau and Animal Welfare Working Group were fortunate to receive support from Ms Sonja Rosic-Banjanin during July and August and the following report provides a valuable perspective from a future veterinarian.

‘To be able to teach, one must first learn, by combining practical experience with theoretical knowledge. There is no better way to learn about the role of the OIE in animal health, public health and, specifically animal welfare, than by participating in the process of developing the OIE guidelines. I was fortunate in having this opportunity during my externship at the OIE Headquarters in Paris from 3 July to 30 August 2006.

The most interesting aspect of this process for me is that each word included in the OIE guidelines is carefully weighed to convey the exact meaning and to allow appropriate flexibility in its application. It is an equivalent outcome rather than an identical approach to the issue that the guidelines communicate to the 167 Member Countries of the OIE. The process is dynamic and the guidelines continuously revised. To witness the effort and cooperation of this process is fascinating and is a privilege that I greatly appreciated.

The process of creating guidelines on animal welfare is difficult due to the complexity and sensitivity of this issue, with its multiple ethical, economical, political and scientific dimensions, especially at the international level. To become directly involved in this process during the fifth meeting of the OIE Permanent Working Group on Animal Welfare (PAWWG) in July 2006 was an honour and a pleasure. The PAWWG meeting was an excellent introduction to the specific issues currently on the agenda and the stakeholders involved. The approachability of the Members of the PAWWG allowed for my active participation and greatly improved my understanding of the issues discussed.

The transparent approach of the OIE in addressing animal welfare on a global scale provides a unique opportunity for stakeholders to communicate, learn and teach. The PAWWG can utilise this knowledge and these resources to address wide-ranging issues, including stray animal control, undergraduate veterinary curricula, aquatic animal welfare, terrestrial animal housing and management and laboratory animal welfare.

The role of the OIE and the PAWWG in the field of animal welfare is the key to securing harmonised approaches and improved animal welfare internationally. The veterinary community should be proud of the accomplishments of the OIE and the PAWWG and should support the initiative by establishing and promoting animal welfare as a key component of the profession. As a future veterinarian, I would like to thank Dr Brian Evans, Canada’s Chief Veterinary Officer and Delegate to the OIE and Dr Bernard Vallat, Director General of the OIE, for recognising veterinary students as prospective stakeholders in the field of animal welfare, and thus allowing me to participate in this OIE initiative as part of my summer externship.’

It is hoped that this update is proving useful to Bulletin readers and suggestions for material to be included in future issues will continue to be welcomed.

A.C. David Bayvel
Chair, Animal Welfare Working Group
In May 1994, the International Committee of the OIE requested the Foot and mouth disease and Other Epizootics Commission (now called the Scientific Commission for Animal Diseases) to develop a procedure for the official recognition by the OIE of the foot and mouth disease (FMD) free status of Member Countries. The procedure has since been expanded to include official recognition of freedom from rinderpest, contagious bovine pleuropneumonia (CBPP) and bovine spongiform encephalopathy (BSE).

The procedure for the official recognition of country status for these four diseases, which was adopted by resolution by the OIE International Committee, can be briefly summarised as follows:

Any Member Country that wishes to be included in the list of disease free countries or to change its status (for example, to move from the list of countries/zones free with use of vaccination to the list of countries/zones free without use of vaccination) sends a request to the OIE Director General, accompanied by specific supporting documentation such as the country questionnaires for FMD, rinderpest or BSE, who in turn sends it to the Scientific Commission. Documentation could be in any of the three official languages of the OIE and should be supplied in hardcopy as well as in electronic format (MSWord or PDF file). The chapter and accompanying questionnaire for CBPP are currently reviewed by the Scientific Commission. Countries wishing to apply for the evaluation of status for CBPP are advised to consult either the questionnaire for rinderpest or FMD in the interim as most of the information required for these two diseases would be equally applicable for CBPP.

In May 2002, the OIE International Committee adopted Resolution No. XVIII asking Member Countries wishing to be evaluated for BSE, FMD and CBPP status, to submit with their application, 9,000 Euros for BSE and 7,000 Euros each for FMD, Rinderpest and CBPP. Least developed countries need to submit only half these amounts. These payments will be required only when a country applies for recognition for the first time. For subsequent applications, only half of the initial sum will be charged.

The Commission on advice from the ad hoc Groups of experts for each of these diseases, can conclude on a final recommendation for adoption by the International Committee of the OIE or the Commission may determine that additional documentation is required or that a visit to the country from an expert panel is necessary before a recommendation for adoption can be submitted to the International Committee.

Once the Commission recommends the acceptance of a formal request by a Member Country, all OIE Member Countries are informed of the OIE’s intention to change the disease status of the Member Country for that particular disease. Member Countries then have 60 days in which to register any objection in writing. Should an objection be raised, which must be based on scientific or technical grounds, the country or countries objecting are required to submit documentation supporting their case to the Director General. In this case, the Director General consults the Scientific Commission, which decides whether to accept or reject the objection. Member countries wishing to obtain additional information relevant to the application of another Member Country, can request it directly from the Official delegate to the OIE of the relevant country.

At each stage in this procedure, if it is deemed necessary, the Commission may be assisted by an expert panel, nominated by the Director General, to examine field data. The Commission and the expert panels are
guided in their decision-making by the provisions of the Terrestrial Animal Health Code and Manual of Diagnostic Tests and Vaccines for Terrestrial Animals current at the time of evaluation as well as any other supporting documentation supplied by the Member Country. All the Commission’s proposals must be ratified by vote by the International Committee. During the General Session in May of each year, the International Committee after considering the recommendations of the Scientific Commission, adopts a resolution for each of these four diseases entitled respectively ‘Recognition of the Foot and Mouth Disease/Rinderpest/ Contagious Bovine Pleuropneumonia/ Bovine Spongiform Encephalopathy Status of Member Countries’.

For FMD, rinderpest, BSE and CBPP, free countries that experience outbreaks of these diseases, a ‘fast track’ procedure for regaining its free status exists. During the General Sessions in 1997 (for FMD) and 2004 (for Rinderpest, CBPP and BSE), the International Committee adopted a resolution that delegates to the Scientific Commission the authority to recognise after evaluation of country submissions and without further consultation with Member Countries and the International Committee, that a Member Country or zone within its territory has regained its previously recognised status with respect to FMD, rinderpest, BSE and CBPP, following outbreaks or infections, as appropriate, in accordance with the relevant provisions of the Terrestrial Code.

Member Countries wishing to submit dossiers for evaluation by the Scientific Commission should take note of the time schedule of meetings of the Commission and ad hoc Groups. The Bureau of the Commission meets in May and January each year and meetings of the full Scientific Commission for Animal Diseases in September and February. Meetings of the ad hoc Groups for country evaluations are normally scheduled during the months of July to the end of January to enable sufficient time for the Commission to evaluate the recommendations of the ad hoc Groups and to circulate the tentative lists of countries recommended for the allocation of disease freedom, to Member Countries for comment. The final list of recommendations that will be submitted to the International Committee for adoption during the General Session in May each year is usually circulated to Member Countries during the month of February prior to the General Session to allow for the 60 days period for comments by Member Countries.

The adoption of Resolution XXVII at the 74th General Session of the OIE in May 2006, giving recognition by the International Committee of the OIE to BSE categorisation status of several Member Countries, also signifies the acceptance by the European Commission, the EU Council and the EU Parliament of a process that would now be the sole responsibility and mandate of the OIE. Countries that were thus previously classified for BSE in accordance with the EC GBR index system will also have to be assessed in accordance with the new categorisation criteria of the OIE as the EC will no longer continue with assessment for BSE using the GBR system. To make provision for a possible influx of applications from Member Countries, additional capacity has been created at the Central Bureau to manage the process.

The maintenance of a disease free status is dependent on continued observance of OIE rules and reporting by Member Countries of any significant events that may change that status. Failure to comply provides grounds for the OIE to revoke the given status. Member countries are obliged to notify the OIE in writing during November of each year that the epidemiological situation in respect of each of the diseases for which a status of disease freedom was allocated by the International Committee, remained unchanged.
OIE procedures for self-declaration of freedom from OIE listed diseases by a Member Country

A Member Country can declare itself free of a disease listed in the Terrestrial Animal Health Code for which provision has not been made for official declaration of freedom by the OIE and also provisional freedom from rinderpest and CBPP under the conditions outlined in Appendix 3.8.2 and Appendix 3.8.3 in the Terrestrial Code. This can be done if that country is satisfied that it can provide the necessary sanitary guarantees to its trade partners that its self-declaration of freedom meets the requirements for freedom as outlined in the relevant chapters of the Terrestrial Code. A Member Country wishing to declare itself free from a given OIE listed disease or provisionally free from rinderpest and CBPP, can submit a declaration to the OIE stating that it declares itself free from such disease in accordance with the requirements of the Terrestrial Code. This declaration must be signed by the Official Delegate to the OIE of the Member Country. This declaration could then be published in the weekly Disease Information report and on the OIE website for the information of Member Countries. The OIE is not responsible for inaccurate publication of country/zone disease status based on inaccurate information or changes in epidemiological status or other significant events that were not promptly reported to the Central Bureau subsequent to the time of self-declaration of freedom. The self-declaration for freedom from an OIE listed disease is on the responsibility of the Member Country concerned and does not have official OIE recognition status as for diseases published in the annual lists for official disease freedom adopted by the OIE International Committee.
The 74th Annual General Session of the International Committee of the World Organisation for Animal Health (OIE) was held in Paris from 21 to 26 May 2006.

The General Session notably brings together representatives appointed by the Governments of the 167 OIE Member Countries. Approximately 600 participants representing Member Countries, intergovernmental organisations (FAO, WHO, World Bank, WTO etc.) took part in the event. The Session was honoured by the presence, alongside the President and the Director General, of high-ranked authorities, including numerous Ministers of OIE Member Countries.

Member Countries praised the role played by the OIE in the global fight against avian influenza. They particularly saluted the agreement reached with the World Bank and key donors to support developing and in transition countries to invest in programmes aimed at bringing their Veterinary Services in line with OIE standards.

The main points dealt with during the Session were as follows:

– The session accredited the application of a new Collaborating Centre – the Centre for Disease Control (CDC in Atlanta) – with the aim of better preventing and controlling animal diseases transmittable to human beings. It also recognised the crucial role played by the OIE network of 170 reference laboratories and collaborating centres in reaching the organisation’s objectives;
– Member Countries welcomed the new World Animal Health Information System (WAHIS) that will strengthen OIE’s actions in terms of transparency on state of animal diseases worldwide;
– Consistent with the framework of its usual standard-setting activities, the Committee adopted new and updated international standards aimed at providing better safeguards for the sanitary safety of world trade in terrestrial and aquatic animals and their products as well as guidelines to better implement surveillance of animal diseases and zoonoses on their territory.
– Member countries also voted new improvements to chapters about animal welfare and food safety in production phase;
– They adopted policy lines on identification and animal traceability;
– Special attention was given to updating the chapter on BSE in the Terrestrial Animal Health Code. Adopted texts highlighted global surveillance methods that will allow the OIE to propose willing Member Countries a new procedure for an official recognition of their status on the disease;
– The Session approved the lists of countries or zones recognised by the OIE as being free from foot and mouth disease, rinderpest, contagious bovine pleuropneumonia and bovine spongiform encephalopathy;
– Member Countries also decided that notification to the OIE of any detection of highly pathogenic avian influenza (HPAI) in wildlife was to be compulsory;
– The list of Veterinary Critically Important Antimicrobials (VCIA) defined by OIE was published;
– The worldwide zoosanitary situation has been examined in detail;
– Two technical items of biggest interest were presented and debated during the Session and gave rise to Resolutions passed by the International Committee:
– Economic and social justification of investment in animal health and zoonoses;
– Future approaches needed to ensure veterinary education meets societal demands.

The high level of scientific expertise of the speakers and the quality of the debates that followed the presentation of each technical item will have served to promote the global application of concepts that are essential for improved control of animal diseases and zoonoses.

The International Committee undertook the election of the new OIE President. Dr Barry O’Neil was elected for a three-year mandate. Members of the Administrative Commission, Regional Commissions and Specialist Commissions were also elected by the General Assembly.
Resolutions adopted by the International Committee of the OIE during the 74th General Session

21-26 May 2006

RESOLUTION XIII

Agreement between the World Organisation for Animal Health (OIE) and the Arab Organization for Agriculture Development (AOAD)

CONSIDERING
That it is desirable, in the general interest of all concerned, that cooperation be established between the OIE and the Arab Organization for Agriculture Development (AOAD),

The Agreement between the two organisations approved following the deliberations of the Administrative Commission on 19 May 2006 (74 SG/18),

THE COMMITTEE DECIDES
To approve the terms of this document and its signature by the Director General on behalf of the OIE.

(Adopted by the International Committee of the OIE on 26 May 2006)

RESOLUTION XIV

Agreement between the World Organisation for Animal Health (OIE) and the Economic Community of West African States (ECOWAS)

CONSIDERING
That it is desirable, in the general interest of all concerned, that cooperation be established between the OIE and the Economic Community of West African States (ECOWAS),

The Agreement between the two organisations approved following the deliberations of the Administrative Commission on 19 May 2006 (74 SG/19),

THE COMMITTEE DECIDES
To approve the terms of this document and its signature by the Director General on behalf of the OIE.

(Adopted by the International Committee of the OIE on 26 May 2006)

RESOLUTION XV

Agreement between the World Organisation for Animal Health (OIE) and the World Association of Veterinary Laboratory Diagnosticians (WAVLD)

CONSIDERING
That it is desirable, in the general interest of all concerned, that cooperation be established between the OIE and the World Association of Veterinary Laboratory Diagnosticians (WAVLD),

The Agreement between the two organisations approved following the deliberations of the Administrative Commission on 19 May 2006 (74SG/20),

THE COMMITTEE DECIDES
To approve the terms of this document and its signature by the Director General on behalf of the OIE.

(Adopted by the International Committee of the OIE on 26 May 2006)
RESOLUTION XVI
Agreement between the World Organisation for Animal Health (OIE) and the International Committee of Military Medicine (ICMM)

CONSIDERING
That it is desirable, in the general interest of all concerned, that cooperation be established between the OIE and the International Committee of Military Medicine (ICMM),
The Agreement between the two organisations approved following the deliberations of the Administrative Commission on 19 May 2006 (74 SG/21),
THE COMMITTEE DECIDES
To approve the terms of this document and its signature by the Director General on behalf of the OIE.

(Adopted by the International Committee of the OIE on 26 May 2006)

RESOLUTION XVII
Agreement between the World Organisation for Animal Health (OIE) and the International Egg Commission (IEC)

CONSIDERING
That it is desirable, in the general interest of all concerned, that cooperation be established between the OIE and the International Egg Commission (IEC),
The agreement between the two organisations approved following the deliberations of the Administrative Commission on 19 May 2006 (74 SG/22),
THE COMMITTEE DECIDES
To approve the terms of this Agreement and its signature by the Director General on behalf of the OIE.

(Adopted by the International Committee of the OIE on 26 May 2006)

RESOLUTION XVIII
Terms of Reference of the Regional Commissions of the World Organisation for Animal Health (OIE)

NOTING
That the five Regional Commissions of the World Organisation for Animal Health (OIE), namely the OIE Regional Commission for Africa, the OIE Regional Commission for the Americas, the OIE Regional Commission for Asia, the Far East and Oceania, the OIE Regional Commission for Europe and the OIE Regional Commission for the Middle East, were created on the basis of the OIE Organic Rules decided by the International Committee on 24 May 1973,
AWARE
Of the need for a more precise definition of the purpose and mode of operation of the Regional Commissions, namely to take into account the evolution and the extension of the missions of the OIE and the provisions of the Fourth Strategic Plan adopted by the International Committee on 27 May 2005,
GIVEN
The Basic Texts and in particular Chapter III of the General Rules of the OIE relating to Regional Commissions,
The favourable opinion of the Administrative Commission,
THE COMMITTEE DECIDES THAT
1. The five Regional Commissions of the OIE shall be governed by the Terms of Reference and Internal Rules of the Regional Commissions appended to the present Resolution.
2. The Director General shall be responsible for the implementation of the provisions of the Terms of Reference and Internal Rules of the Regional Commissions appended to the present Resolution.

3. The Member Countries hosting the Regional Conferences shall be invited to respect the corresponding provisions appended to the present Resolution.

(Adopted by the International Committee of the OIE on 26 May 2006)

TERMS OF REFERENCE AND RULES OF THE REGIONAL COMMISSIONS

Terms of Reference and Internal Rules

I. Terms of Reference

The OIE Regional Commissions are bodies of the World Organisation for Animal Health (OIE) established by decision of the International Committee of the OIE to further the objectives of the OIE in each region of the world.

When Countries accede to the OIE through diplomatic channels they automatically become members of the corresponding OIE Region. The Member Countries of the Region, meeting in Conference, may vote to approve the membership of other countries.

There are five Regional Commissions (Africa; the Americas; Asia, the Far East and Oceania; Europe; and the Middle East). Their terms of reference are:

1. to hold Regional Conferences bringing together the OIE Member Countries of the Region, the OIE Regional Representative(s), the Director General of the OIE, the representatives of international and regional organisations and experts invited to:
   a. examine within a regional framework issues relating to animal health, animal welfare and animal production food safety;
   b. produce recommendations to be submitted for approval to the International Committee of the OIE and implemented, after adoption, by the Central Bureau and/or the Regional Representations;
2. to propose adaptations of OIE decisions, programmes, strategies, policies and activities to the conditions and needs of the Regions and, where appropriate, Sub-regions;
3. to contribute to strengthening the capacities of the Veterinary Services of the OIE Member Countries of each Region;
4. to contribute to the harmonisation of sanitary regulations relating to trade in animals and animal products between the Member Countries of each Region;
5. to increase the contribution of livestock to national economies and participate in poverty alleviation through international trade;
6. to give an advisory opinion on the headquarters of the Regional Representation and, where appropriate, that of Sub-regional Representations, and on the work programmes of the Regional Representations and their sub-regional offices;
7. to examine, and where appropriate approve, applications from Member Countries of the Region relating to the creation of new OIE Collaborating Centres. Candidatures presented by Member Countries must first have received the approval of the Specialist Commission concerned and the Administrative Commission. Applications are then transmitted to the President of the relevant Regional Commission by the Director General. The candidatures are then submitted to the International Committee for approval.

Regional Commissions shall function on the basis of the Internal Rules.

II. Internal Rules

Article 1

OIE Regional Commissions shall be constituted by decision of the International Committee following a proposal by members of the Committee or by the Administrative Commission.

Article 2

OIE Member Countries whose territory is predominantly situated in a given Region delineated by the OIE shall have an automatic right to membership of the corresponding Regional Commission. In certain cases, duly warranted by the presence within a Region of a geographical territory of a country belonging to another Region, an OIE Member Country may be a member of two or more Regional Commissions, subject to its request being accepted by the Regional
Article 3
Non member countries may participate, with observer status and without the right to vote, in meetings of the Regional Commissions, subject to a joint decision by the Director General and the President of the Regional Commission.

Article 4
In accordance with Article 13 of the General Rules, the Bureau of each Regional Commission shall be composed of a President, two Vice-Presidents and a Secretary General, elected by the International Committee from among the Members on duty of the Committee, on the proposition of Delegates who are Members of the Regional Commission in question.

Article 5
The members of the Bureaux of the Regional Commissions shall be elected, in an individual capacity, by the International Committee for a period of three years. Members shall be eligible for re-election.

In the event of elections to fill vacancies on the Bureaux of Regional Commissions, the Commissions may agree on regional candidatures. The candidates proposed shall be chosen from among the Delegates of the Member Countries of the Regional Commission. The President of each of the Regional Commissions concerned or, in the absence of the President, one of the Vice-Presidents shall then inform the International Committee, during one of the administrative sessions of the General Session, of the proposition of the Commission. The International Committee shall then be invited to vote on the proposition.

Article 6
The Bureaux of the Regional Commissions may, in accordance with the sanitary priorities of their region, invite the Director General to convene Ad hoc Groups to analyse, discuss and develop proposals on their specific expertise. These proposals shall be submitted to the Bureaux of the Regional Commissions before being assessed by the statutory Specialist Commissions (the Scientific Commission for Animal Diseases, the Biological Standards Commission, the Terrestrial Animal Health Standards Commission and the Aquatic Animal Health Standards Commission).

Article 7
The Bureaux of the Regional Commissions shall meet, in accordance with Articles 14 and 15 of the General Rules, at least once a year, convened by the Director General of the OIE in consultation with the President of the Commission concerned and the OIE Regional Representative concerned, to discuss the programmes, strategies, policies, activities and recommendations of the Commission.

The Regional Commissions shall meet during the annual General Session on the basis of an agenda prepared by their respective Bureaux, with the support of the Regional Representative concerned and in accordance with the Director General.

Article 8
Each Regional Commission shall hold, every two years and on each occasion in a different country, with the approval of the International Committee or, in an emergency, with the agreement of the Administrative Commission and the Director General, a Regional Conference to examine animal health, animal welfare and animal food production safety issues within the Region in question and elaborate recommendations and reports, in accordance with Article 16 of the General Rules.

Article 9
Regional Conferences shall be convened by the Director General and organised by the Regional Commissions and the OIE Central Bureau in liaison with the corresponding Regional Representation, after they have ensure that the government of the Host Country is willing to grant all the Delegates, rapporteurs and observers and the members of the OIE secretariat participating in the Conference the immunities they need in order to carry out in total independence the duties that they are required to perform, and to grant all material facilities for holding the Regional Conference. The Host Country shall make the necessary arrangements to ensure that any entry visas and stay permits that may be required by the Delegations of OIE Member Countries are issued in a timely manner.

Article 10
The programme for Regional Conferences shall be approved by the Director General and the President of the Regional Commission in liaison with the corresponding Regional Representation. Invitations to the countries concerned to take part in a Regional Conference shall be sent by the Director General to the Delegates of these countries. Other invitations shall be issued with the agreement of the Director General, the Delegate of the Host Country and the President of the Regional Commission.
OIE news

TERMS OF REFERENCE AND RULES OF THE REGIONAL COMMISSIONS

Article 11
The OIE Central Bureau and the relevant Regional Representation shall assist the General Rapporteur with the preparation of meeting reports, in particular by providing secretarial staff to coordinate and support the activities of the secretariat provided by the Host Country for the Conference.

Article 12
For Regional Conferences, the OIE Central Bureau and/or its Regional Representation, if the Host Country so requests, shall be responsible for:
- defraying the travelling expenses and per diem allowance of speakers, members of the Bureau of the Regional Commission and members of the Central Bureau and the corresponding Regional Representation;
- defraying the travelling expenses and fees of interpreters (if appropriate);
- printing the preparatory documents for the Conference, subject to their being received at least one month before the Conference;
- an official dinner for the participants.

Article 13
For the Regional Conferences, the Host Country shall, on the basis of a list of requirements provided by the Director General of the OIE, be responsible for:
- reserving hotel accommodation and sending participants practical details about hotels and visas and any other useful information;
- contributing where possible to the cost of hotel accommodation and catering for representatives of Member Countries, by a decision of the Host Country or local authorities;
- rental of the conference hall and additional rooms, including for the secretariat, and installation of a simultaneous translation system;
- printing documents other than those referred to in Article 11;
- secretarial support (personnel and equipment);
- coffee breaks and refreshments during the conference;
- a professional or cultural visit;
- local transport to the conference venue;
- an official dinner for the participants.

Article 14
During Regional Conferences, the Regional Representations shall provide the Regional Commissions and the Host Country with logistic support.

Article 15
Financing of the Conferences of the Regional Commissions, except for items defrayed by the Host Country under the terms of Article 13, shall be covered by the OIE Regular Budget and, if necessary, by the eligible special accounts, including those of the OIE Regional Representations.

Article 16
Representatives of national, regional or international organisations and members of OIE Collaborating Centres and Reference Laboratories, designated by the Director General, may participate in the Conferences of the Regional Commissions and speak on topics within their field of competence. These representatives do not have the right to vote.

Article 17
The date, venue and choice of technical items for the following Conference may be established either during the Regional Conference or at the following General Session of the International Committee, on a proposal by the President of the Regional Commission in question.

Article 18
A draft report of the Regional Conference shall be presented on the last day of the Conference. The comments of participants will be recorded for inclusion in the final report, which will be established and distributed by the OIE Central Bureau.

Article 19
During the General Session of the International Committee, the President, Vice-President or Secretary General of each Regional Commission shall present the activity report of the Commission, and the recommendations and conclusions of the Regional Conferences held since the previous General Session. All these recommendations shall be submitted to the International Committee and, if approved, shall be implemented by the Director General. The vote shall be by a simple majority.

(Adopted by the International Committee of the OIE on 26 May 2006)
CONSIDERING
the increasing workload of the OIE Biological Standards Commission, hereafter referred to as the Laboratories Commission, which makes it necessary for this Commission to have two additional experts at its disposal, and at the request of the said Commission,
the need for a geographically balanced representation in the composition of this Commission, insofar as is possible,
GIVEN
the Terms of Reference, Internal Rules and Qualifications of the Members of the OIE Laboratories Commission adopted by the OIE International Committee on 22 May 2003,
THE COMMITTEE DECIDES THAT
Articles 1 and 2 of the Internal Rules of the OIE Laboratories Commission shall be abrogated and replaced by the articles hereafter:

“Article 1
The OIE Biological Standards Commission shall consist of a Bureau (comprised of a President, a Vice-President and a Secretary General) and two other Members.

Article 2
The International Committee elects the individual Members of the Bureau and then the other two Members respectively, taking into account the need for a geographically balanced representation, and the need for relevant expertise.

The Members of the Commission are elected for a period of three years.
The mandate of the Commission may be renewed by the International Committee.

Positions should be filled as they fall vacant, before the elections referred to in the first paragraph.”

(Adopted by the International Committee of the OIE on 26 May 2006)

CONSIDERING THAT
1. During the 63rd General Session, the International Committee adopted Resolutions XI and XII, ‘Establishment of a list of foot and mouth disease (FMD) free countries where vaccination is not practised’, and ‘Procedure for the recognition of the foot and mouth disease status of Member Countries’, respectively,
2. During the 64th General Session, the International Committee adopted Resolution XII, which asks that the Director General publish a list of the countries or zones within national territories that fulfill the criteria of one of the FMD free categories described in Chapter 2.2.10. of the Terrestrial Animal Health Code (the Terrestrial Code),
3. The Scientific Commission for Animal Diseases (the Scientific Commission) has continued to apply the procedure approved by the International Committee, and has supported the recognition of the FMD free status of additional countries and zones within national territories for annual adoption of the list by the International Committee,
4. Recommendations of the Scientific Commission regarding the evaluation of countries as being free from foot and mouth disease have been submitted to Member Countries for comments as outlined in Resolution XVI, which was adopted during the 67th General Session of the International Committee.

5. The Scientific Commission proposed that an updated list of countries and zones previously recognised as free from foot and mouth disease and those newly proposed by the Scientific Commission in consultation with Member Countries be annually adopted by resolution.

6. During the 65th General Session, the International Committee adopted Resolution XII, which stated that the Delegates of Member Countries where countries or zones within their national territories are recognised as FMD free, annually confirm by letter during the month of November that their FMD status and the criteria by which that status was recognised have remained unchanged.

7. During the 65th General Session, the International Committee adopted Resolution XVII delegating to the Scientific Commission the authority to recognise, without further International Committee consultation, that a Member Country or zone within its territory has regained its previously recognised FMD free status following outbreaks that are eradicated in accordance with the relevant provisions of Chapter 2.2.10. of the Terrestrial Code.

8. During the 71st General Session, the International Committee adopted Resolution XXI delegating to the Scientific Commission the authority to recognise, without further International Committee consultation, an FMD free zone created following outbreaks within a Member Country or its territory in accordance with the relevant provisions of Chapters 1.3.5. and 2.2.10. of the Terrestrial Code.

9. During the 70th General Session, the International Committee adopted Resolution XVIII asking Member Countries applying for evaluation for freedom from FMD to meet part of the costs sustained by the OIE Central Bureau in the evaluation process.

10. Information published by the OIE is derived from declarations made by the official Veterinary Services of Member Countries. The OIE is not responsible for inaccurate publication of country disease status based on inaccurate information or changes in epidemiological status or other significant events that were not promptly reported to the Central Bureau subsequent to the time of declaration of freedom.

THE COMMITTEE RESOLVES

That the Director General publish the following list of Member Countries recognised as FMD free countries where vaccination is not practised, according to the provisions of Chapter 2.2.10. of the *Terrestrial Code*:

1. For information on the status of non-contiguous territories of Member Countries recognised as FMD free, please address enquiries to that country’s Delegate or to the Director General

* Including the territory of Kosovo administered by the United Nations
AND

That the Director General publish the following list of Member Countries recognised as FMD free countries where vaccination is practised, according to the provisions of Chapter 2.2.10. of the Terrestrial Code:

Taipei China, Paraguay and Uruguay

AND

That the Director General publish the following list of Member Countries as having an FMD free zone where vaccination is not practised, according to the provisions of Chapter 2.2.10. of the Terrestrial Code:

Argentina: zone situated south of the 42° parallel;
Colombia: zone designated by the Delegate of Colombia in documents addressed to the Director General on 25 November 1995 (Area I - Northwest region of Choco Department) and 3 April 1996;
Malaysia: zones of Sabah and Sarawak designated by the Delegate of Malaysia in a document addressed to the Director General on 15 December 2003;
Namibia: zone designated by the Delegate of Namibia in a document addressed to the Director General on 6 February 1997;
Peru: one zone as designated by the Delegate of Peru in a document addressed to the Director General in December 2004.
Philippines: Islands of Mindanao, Visayas, Palawan and Masbate;
South Africa: zone designated by the Delegate of South Africa in a document addressed to the Director General in May 2005;

AND

That the Director General publish the following list of Member Countries as having FMD free zones where vaccination is practised, according to the provisions of Chapter 2.2.10. of the Terrestrial Code:

Bolivia: zone of Chiquitania designated by the Delegate of Bolivia in documents addressed to the Director General in January 2003 and a zone situated in the western part of the Department of Oruro in documents addressed to the Director General in September 2005
Brazil: States of Acre along with two adjacent municipalities of Amazon state, Rio Grande do Sul, Santa Catarina, and Rondonia;
Colombia: zone designated by the Delegate of Colombia in documents addressed to the Director General on January 2003 and two zones designated by the Delegate in documents addressed to the Director General in December 2004.

(Adopted by the International Committee of the OIE on 23 May 2006)

CONSIDERING THAT

1. During the 69th General Session, the International Committee adopted Resolution No. XV, asking Member Countries that wish to be evaluated for conformation with the requirements of the OIE Terrestrial Animal Health Code (the Terrestrial Code) for bovine spongiform encephalopathy (BSE) free status to submit a formal application to the Director General of the OIE for consideration by the Scientific Commission for Animal Diseases (Scientific Commission),
2. An Ad hoc Group of experts on BSE (OIE Ad hoc Group for Evaluation of Country Submissions for Recognition as complying with the Terrestrial Code as Bovine Spongiform Encephalopathy Free) has been set up by the OIE and the Group has developed guidelines to facilitate the submission of data by Member Countries in accordance with the requirements in the current edition of the Terrestrial Code,

3. During the 70th General Session, the International Committee adopted Resolution XVIII asking Member Countries applying for this evaluation to meet part of the costs sustained by the OIE Central Bureau in the evaluation process,

4. During the 71st General Session, the International Committee adopted Resolution XXII authorising the Scientific Commission to also evaluate submissions for provisional freedom from BSE in accordance with Article 2.3.13.4. of the Terrestrial Code,

5. The Ad hoc Group has already examined submissions from several countries and made appropriate recommendations that have been endorsed by the Scientific Commission

6. These recommendations have been submitted to Member Countries for comments as outlined in Resolution No. XVI, which was adopted during the 67th General Session of the International Committee for foot and mouth disease (FMD),

7. During the 72nd General Session, the OIE International Committee adopted Resolution No. XXI asking the Director General to establish a list of countries or zones recognised by the OIE as BSE ‘free’ and ‘provisionally free’ in accordance with Chapter 2.3.13. of the 13th edition of the Terrestrial Code (2004). This list should be updated as and when new countries are approved by the International Committee and shall be adopted annually by resolution.

8. During the 72nd General Session, the OIE adopted Resolution No. XXI asking the Director General to inform Delegates of Member Countries whose countries or zones within their national territories are recognised as ‘free’ or ‘provisionally free’ from BSE that they should annually confirm by letter during the month of November whether their status and the criteria by which their status was recognised have remained unchanged. The list of countries or zones is published free of charge by the OIE.

9. During the 73rd General Session, the OIE adopted Resolution No. XXI requesting the Scientific Commission to continue to examine the dossiers of applicant countries in accordance with Chapter 2.3.13. of the 13th edition of the Terrestrial Code (2004), until one year after a new BSE chapter (describing three categories of BSE country status) and all its complementary surveillance appendices are adopted by the International Committee.

10. During the 73rd General Session, the OIE adopted Resolution No. XXI confirming that countries which had already submitted dossiers for the evaluation of country status need not pay any additional costs should they have to renew their applications.

11. Information published by the OIE is derived from appropriate declarations made by the official Veterinary Services of Member Countries. The OIE is not
RESOLUTION XXVII

Recognition of Member Countries Free Status from Rinderpest Infection and Rinderpest Disease

responsible for inaccurate publication of country disease status based on inaccurate information or changes in epidemiological status or other significant events that were not promptly reported to the Central Bureau,

THE COMMITTEE RESOLVES THAT

1. The Director General publish the following list of Member Countries recognised as free from BSE in accordance with Chapter 2.3.13. of the 13th edition (2004) of the Terrestrial Code:
   - Australia, Argentina, New Zealand and Uruguay.
2. The Director General publish the following list of Member Countries recognised as ‘provisionally free’ from BSE in accordance with Chapter 2.3.13. of the 13th edition (2004) of the Terrestrial Code:
   - Chile, Iceland, Paraguay and Singapore.
3. Countries listed above wishing to submit an application before the end of 2006 for confirmation of their status will be assessed against the Terrestrial Code of 2004 and will remain on the list published by the OIE until May 2008.
4. Any country wishing to submit an application before the end of 2006 for negligible risk or controlled risk status for BSE, will be assessed against the Terrestrial Code of 2006.
5. After December 2006, all applications for BSE status will be assessed against the Terrestrial Code current at the time.

(Adopted by the International Committee of the OIE on 23 May 2006)

RESOLUTION XXVIII

CONSIDERING THAT

1. During the 63rd General Session, the International Committee adopted Resolution No. XIV ‘Establishment of a list of countries that are free of rinderpest’,
2. During the 68th General Session, the International Committee adopted Resolution No. XIII designating a baseline list of Member Countries that were free from rinderpest infection. The countries included in the list certified that they met the requirements specified in Chapter 2.2.12. of the Terrestrial Animal Health Code (the Terrestrial Code),
3. The OIE has also developed a list of countries that are considered to be free from rinderpest disease in accordance with Chapter 2.2.12. of the Terrestrial Code, the Scientific Commission for Animal Diseases (the Scientific Commission) regarding countries that are evaluated as free from rinderpest disease and from rinderpest infection have been submitted to Member Countries for comments as outlined in Resolution No. XVI which was adopted during the 67th General Session of the International Committee,
4. The Scientific Commission has continued to apply the procedure approved by the International committee and has supported the recognition of a list of countries and zones as free from rinderpest disease and rinderpest infection for annual adoption of this list by the International Committee,
5. During the 71st General Session, the Scientific Commission proposed that
Member Countries so recognised reconfirm annually whether their rinderpest status as well as the conditions under which such status was granted have remained unchanged and that this annual reconfirmation would be a requirement for maintaining OIE recognition.

7. During the 70th General Session, the International Committee adopted Resolution No. XVIII resolving that most of the costs incurred by the OIE Central Bureau in the evaluation of country applications for obtaining the free status with respect to rinderpest disease or rinderpest infection would be recovered whenever possible from sources other than the applicant countries.

8. Information published by the OIE is derived from appropriate declarations made by the official Veterinary Services of Member Countries. The OIE is not responsible for inaccurate publication of country disease status based on inaccurate information or changes in epidemiological status or other significant events that were not promptly reported to the Central Bureau subsequent to the time of declaration.

THE COMMITTEE RESOLVES
That the Director General publish the following list of Member Countries recognised as free from rinderpest infection, according to the provisions of Chapter 2.2.12. of the Terrestrial Code:

RESOLUTION XXIX
Recognition of the Contagious Bovine Pleuropneumonia Status of Member Countries

CONSIDERING THAT
1. Appendix 3.8.3. of the OIE Terrestrial Animal Health Code (the Terrestrial Code) provides for a pathway for Member Countries to be declared free from contagious bovine pleuropneumonia (CBPP) by the OIE if an application including supporting data as outlined in Appendix 3.8.3. of the Terrestrial Code is submitted to the OIE. The Terrestrial Code also provides a procedure for the Scientific Commission for Animal Diseases (the Scientific Commission) to review these applications and report its recommendations to the International Committee,
2. During the 70th General Session, the International Committee adopted Resolution No. XVIII asking Member Countries applying for evaluation for freedom from CBPP to meet part of the costs sustained by the OIE Central Bureau in the evaluation process,
3. During the 71st General Session, the International Committee approved Resolution N° XXIV regarding the recognition of the CBPP status of specific Member Countries,
4. Appendix 3.8.3. contains provisions for countries or zones within their territories that are continuously free from CBPP for at least 10 years and meet the relevant requirements of Appendix 3.8.3. for “freedom from CBPP” in that
   a) no vaccination has been carried out for at least 10 years,
   b) throughout that period there has been no clinical or pathological evidence of CBPP infection,
   c) throughout that period a permanent adequate disease surveillance and reporting system has been and is still in place covering all susceptible domestic livestock, and
   d) in appropriate circumstances, use of diagnostic procedures capable of differentiating Mycoplasma mycoides from other bovine Mycoplasma infections in the investigation of respiratory disease has been made, with findings consistent with

That the Director General publish the following list of Member Countries having zones designated by their respective Delegates as free from rinderpest disease according to the provisions of Chapter 2.2.12. of the Terrestrial Code;
Ethiopia: zone designated by the Delegate of Ethiopia in a document addressed to the Director General in July 2004
Kenya: zone designated by the Delegate of Kenya in a document addressed to the Director General in August 2005

AND

That the Delegates of Member Countries whose countries or zones within their national territories are recognised as rinderpest infection or rinderpest disease free, annually reconfirm by letter in November of each year that both their status and the criteria by which such status was recognised have remained unchanged.

It is understood that these Delegates will immediately notify the Central Bureau if rinderpest infection or disease occur in their countries or zones within their territories.

(Adopted by the International Committee of the OIE on 23 May 2006)
freedom from *M. mycoides* infection, may be proposed to be declared free from CBPP by the Scientific Commission without the necessity to proceed through the normal intermediate steps detailed in Appendix 3.8.3. of the *Terrestrial Code*.

5. During the 72nd General Session, the International Committee adopted Resolution No. XXIII asked the OIE Director General to establish a list of countries or zones free from CBPP with or without vaccination and include in that list countries already recognised free of CBPP by the OIE.

6. The Scientific Commission continue to apply the procedure approved by the International Committee with respect to the recognition of disease free status and support the recognition of the CBPP free status of additional countries and zones within national territories for annual adoption of the list by the International Committee.

7. An updated list of countries and zones previously recognised as free from CBPP and those newly proposed by the Scientific Commission after consultation of Member Countries will be annually adopted by resolution.

8. Member Countries recognise that information published by the OIE is derived from appropriate declarations made by the official Veterinary Services of Member Countries. The OIE is not responsible for inaccurate publication of country disease status based on inaccurate information or changes in epidemiological status or other significant events that were not promptly reported to the Central Bureau subsequent to the time of declaration of freedom.

THE COMMITTEE RESOLVES THAT

1. The Director General publish the following list of Member Countries recognised as free from CBPP according to the provisions of Appendix 3.8.3 of the *Terrestrial Code*:

   - Australia
   - Botswana
   - Portugal
   - Switzerland

2. The Delegates of Member Countries whose countries or zones within their national territories are recognised as free from CBPP reconfirm by letter in November of each year that both their status and the criteria by which such status was recognised have remained unchanged. It is understood that these Delegates will immediately notify the Central Bureau if CBPP occurs in their countries or in zones within their territories.

(Adopted by the International Committee of the OIE on 23 May 2006)

CONSIDERING THAT

1. The International Committee has adopted a procedure for establishing a list of Member Countries and zones within their territories recognised as free of FMD according to the provisions of chapter 2.2.10. of the *Terrestrial Animal Health Code* (the *Terrestrial Code*),

2. New Member Countries and zones recognised as FMD free are added to the list annually by resolution at the General Session of the International Committee after a period of consultation with the interested Member Country, the Scientific Commission for Animal Diseases, other Member Countries and the final decision of the International Committee,
3. Recognition of FMD free status is suspended upon declaration by a Member Country of an outbreak in a previously disease free national territory or zone,
4. The list of FMD free countries and zones recognised as FMD free is important to some Member Countries for the purpose of trade in animals and animal products. These countries could sustain huge economic losses through lost trade for a period of time exceeding that required in the Terrestrial Code to regain FMD free status following eradication of an outbreak,
5. Chapter 2.2.10. of the Terrestrial Code describes criteria by which under certain circumstances a recognised FMD free country or zone that has had an FMD outbreak can regain its disease free status in less than a year,
6. During the 70th General Session, the International Committee adopted Resolution No. XVIII asking Member Countries applying for evaluation for freedom from FMD to meet part of the costs sustained by the OIE Central Bureau in the evaluation process,
7. During the 65th General Session, the International Committee adopted Resolution No. XVII delegating to the Scientific Commission for Animal Diseases the authority to recognise, without further International Committee consultation, that a Member Country or zone within its territory has regained its previously recognised FMD free status following outbreaks that are eradicated in accordance with the relevant provisions of chapter 2.2.10. of the Terrestrial Code,
8. During the 71st General Session, the International Committee adopted Resolution No. XXI delegating to the Scientific Commission for Animal Diseases the authority to recognise, without further International Committee consultation, an FMD free zone created following outbreaks within a Member Country or its territory in accordance with the relevant provisions of chapters 1.3.5. and 2.2.10. of the Terrestrial Code,
9. The suspension of the free status of a country or a zone within a country as result of an outbreak of FMD in the country or zone, could have a severe impact on the international trade in animals and animal products for the affected Member Country irrespective of the extent of the outbreak,
10. The provisions contained in chapters 1.3.5. and 2.2.10. and appendix 3.8.7. of the Terrestrial Code provide guidelines to Member Countries to effectively identify and separate infected from non-infected zones within a country,
11. The provisions contained in chapters 1.3.5 and 2.2.10 and appendix 3.8.7 of the Terrestrial Code allows Member Countries to establish several zones of freedom from FMD either with or without vaccination, within a country,
12. Articles 2.2.10.4 and 2.2.10.5 of Chapter 2.2.10 of the Terrestrial Code, do not specifically require that free zones of different or similar FMD status within a country be separated from each other by a buffer zone or geographical or physical borders.
13. Some Member Countries have expressed the need for the continuation or early resumption of trade in animals and animal products in the event of an outbreak of foot and mouth disease and after appropriate measures have been taken to control the disease.

THE COMMITTEE RESOLVES THAT
1. The Scientific Commission for Animal Diseases reconsider the current provisions of relevant chapters and appendices in the Terrestrial Code in view of the need of Member Countries to continue with the trade in animals and animal products in the event of an
RESOLUTION XXXII

Recognition and implementation of OIE standards for the validation and registration of diagnostic assays by Member Countries

CONSIDERING THAT

Participation in the international and regional trade in animals and animal products offers opportunities for all Member Countries of the OIE,

Compliance with and the maintenance of international sanitary standards for the trade in animals and animal products are major constraints for many Member Countries to successfully participate in the international and regional trade in animals and animal products,

International standards, guidelines and recommendations of the OIE and the SPS Agreement facilitate access to the international trade market for animals and animal products,

New concepts to facilitate trade in animals and animal products following technological developments in veterinary science are continuously developed and upgraded by the OIE,

Standards regarding the quality and evaluation of Veterinary Services have been developed by the OIE in order to guarantee the credibility of export certification procedures established by the national Veterinary Services of OIE Member Countries,

OIE international sanitary standards may be used even by non-exporting OIE Member Countries as relevant guidelines to improve their national animal health status,

Veterinary Services of many importing and exporting countries do not yet have a harmonised system of export certification that complies with international standards,

The OIE acknowledge that within most Member Countries there are national registration authorities who are legally mandated and responsible for the registration of diagnostic assays for infectious animal diseases for use within that country,

During the 71st General Session of the OIE, the International Committee adopted Resolution No. XXIX endorsing the principle of validation and certification of outbreak of foot and mouth disease within a country or zone and after appropriate measures have been taken in accordance with the provisions of the Terrestrial Code.

2. The Scientific Commission for Animal Diseases reconsider the current provisions of relevant chapters and appendices in the Terrestrial Code to ensure that where several free zones for foot and mouth disease, with or without vaccination, are present in the same country, sufficient sanitary measures are provided to protect the free status of non-affected zones in the event of an outbreak of FMD in one or more of the free zones.

3. The Scientific Commission for Animal Diseases consider the need for possible changes to the relevant chapters and appendices in the Terrestrial Code to expedite the process for the regaining of freedom from disease and resumption of trade following the suspension of the disease free status of a country or zone.

4. The OIE presents its recommendations for consideration by the International Committee during the 75th General Session of the OIE.

(Adopted by the International Committee of the OIE on 23 May 2006)
diagnostic assays for infectious animal diseases by the OIE and giving a mandate
to the Director General of the OIE to set up the specific standard procedures to be
used before the final decision on the validation and certification of the diagnostic
assay is taken by the OIE International Committee,

The final decision on the validation and certification of a diagnostic assay and
adoption thereof by the OIE International Committee in terms of Resolution No. XXIX
of the 71st General Session of the OIE, renders the application of such a diagnostic
assay to be in conformity with an international standard of the OIE,

THE COMMITTEE RESOLVES THAT

1. Member Countries of the OIE are encouraged to give recognition to and apply
wherever possible, the international standards, guidelines and recommendations
developed by the OIE and adopted by the International Committee for the delivery
of veterinary services and the international trade in animals and animal products.

2. Member Countries of the OIE are encouraged to harmonise their standards
for the validation and registration of diagnostic assays with the standards, guidelines
and recommendations in the OIE Manual of Diagnostic Tests and Vaccines for
Terrestrial Animals and where such standards are absent or not yet developed,
to apply the standards in the Manual and in the OIE test register for the registration
of such products within their countries.

(Adopted by the International Committee of the OIE on 25 May 2006)

CONSIDERING THAT

Antimicrobial agents are essential drugs for human and animal health and
welfare. Antimicrobial resistance is a global public and animal health concern that is
influenced by both human and non-human antimicrobial usage. The human, animal
and plant sectors have a shared responsibility to prevent or minimise antimicrobial
resistance selection pressures on both human and non-human pathogens.

The second joint FAO/OIE/WHO workshop on management options for non-
human antimicrobial usage in March 2004 in Oslo recommended that the concept
of “critically important” classes of antimicrobials for human usage should be
developed by WHO. A similar list for animal usage should be pursued by the OIE.

The list of Critically Important Antibacterial Agents (CIA) for Human Medicine
was established in February 2005, in a working group meeting in Canberra.

The OIE ad hoc Group on Antimicrobial Resistance prepared a questionnaire to
collect proposals on antimicrobials of veterinary importance. The questionnaire was
sent to the 167 OIE Member Countries and to International Organisations having
signed a co-operation agreement with OIE in order to establish such a list. A list of
antimicrobials of veterinary importance was compiled from the information received
from Member Countries and was circulated to OIE Member Countries.

When finalised, the list could complement the OIE Guidelines for the responsible
and prudent use of antimicrobial agents in veterinary medicine (OIE Terrestrial
The list could be useful for the risk assessment of antimicrobial resistance in accordance with OIE Terrestrial Code Appendix 3.9.4. In this context, lists of CIA for humans and for animals are elements that could be taken into account in a risk assessment process.

THE COMMITTEE RESOLVES
To publish a preliminary list of antimicrobials of veterinary importance based on the list compiled by the OIE ad hoc Group from the answers received to the questionnaire sent to OIE Member Countries.

To ask the Director General to reconvene the ad hoc Group to further refine the list and consider breaking it down into subcategories according to type of usage.

To use the list further refined within the framework of the work in progress with the WHO, FAO and the Codex Alimentarius Commission on antimicrobial resistance.

To regularly update the list in accordance with new scientific information.

(Adopted by the International Committee of the OIE on 25 May 2006)

CONSIDERING THAT
Developments in all countries of the world with the resultant risks to animal and public health and their impact on trade in animals and animal products demand the involvement of the veterinary profession in all aspects of animal production and well-being.

Emerging and future societal demands dictate that the scope of veterinary training must include considerations of traceability, animal welfare, bio-security, ecosystem health and surveillance for animal diseases, the early detection of, and rapid response to animal disease outbreaks,

This demand needs to be met by training veterinarians and veterinary para-professional personnel in areas essential for the care of terrestrial and aquatic animals,

University and other veterinary training institutions in all countries of the world should strive to meet this challenge,

The quality of Veterinary Services and certification depends on the competence of both veterinary officers and private veterinarians, as they share responsibilities for controlling animal diseases and zoonoses and for ensuring food safety.

THE COMMITTEE RESOLVES THAT
1. The OIE should promote worldwide the development of veterinary curricula both for initial training and for continuing professional development that include the subjects dictated to the veterinary organisation by the emerging societal demand. Collaboration between universities and between universities, Veterinary Services and other stakeholders, is essential to achieve the above-objectives;
2. Universities and veterinary training institutions should develop their curricula accordingly taking into account among others the basic principles as well as the standards of the OIE;
3. The OIE should develop standards and guidelines for the continuing education of the agents of the Veterinary Services (in accordance with the OIE definition) to assure the quality of Veterinary Services;
4. The National veterinary accreditation bodies worldwide should ensure that in their accreditation procedures knowledge of the OIE standards and guidelines is included;
5. The OIE should promote the implementation of international programmes for official veterinarians in collaboration with other international organisations. To this end the use of OIE Collaborating Centres in veterinary training and recent developments in distance learning are considerable assets. Member Countries should promote public/private sectors, tertiary institutions and donor agency participation in the facilitation and the provision of the necessary fundings for these training programmes.

(Adopted by the International Committee of the OIE on 25 May 2006)

CONSIDERING

The significant negative socio-economic impact of animal diseases at the national, regional and global levels, especially the impact of transboundary diseases,

The recent acceleration in the global spread of certain emerging and re-emerging transboundary animal diseases, and infections, most of which are zoonotic, as a result of globalisation,

The Global Public Good character of public and private policies and activities aimed at preventing and controlling pathogens of animal origin that could become transboundary in nature, or be used for bioterrorism,

The need to take account of the probability and impact of the various threats in order to prioritise sustainable and flexible allocation of national and/or external resources,

The existence of international standards adopted by OIE Member Countries in the areas of disease information, surveillance, and control of animal and zoonotic diseases, as well as in the area of quality and evaluation of Veterinary Services,

The fundamental role that national Veterinary Services must play in preventing and controlling animal diseases, including zoonoses, whilst complying with and implementing OIE standards,

The pressing need to ensure that these standards are implemented in all OIE Member Countries in order to prevent and contain the spread of pathogens of animal origin at the national, regional, and global levels, and to overcome the economic and other limitations to successful implementation of these standards that exist in some countries,

The existence and use, under the auspices of the OIE, of the “Performance, Vision and Strategy” (PVS) instrument, a new tool designed to facilitate the identification of areas of improvement to bring national Veterinary Services into compliance with the OIE quality standards in the Terrestrial Animal Health Code.
This will help to prevent and control animal diseases more effectively and/or to demonstrate to their trading partners that the health certificates that they issue are supported by reliable procedures,

The need to continually improve this instrument, in compliance with OIE procedures, as experience in using it grows,

The decision of the World Bank and the donor community represented at the Beijing Conference in January 2006 to consider the use of the PVS tool under the auspices of the OIE as an extremely useful approach for any Member Country requesting international financial aid to build the capacity of its Veterinary Services and help to bring them into compliance with OIE standards, in order to pinpoint the fields in which priority investment must be made,

The need to conduct appropriate socio-economic and financial analyses to evaluate more accurately the direct and indirect effects of health crises of animal origin, as well as the cost of measures needed to prevent and control such crises via the activities of national Veterinary Services, in order to guide policymakers to invest in animal health policies,

The need to continue the technical, economic and financial analyses aimed at fostering the creation or improvement of national, regional and global insurance and reinsurance mechanisms for reducing the adverse economic effects of health crises on sectors and countries,

The need to support OIE Member Countries in the area of socio-economic and financial analyses relating to animal health policies,

The need to support any OIE Member Country that so requests, in the area of Veterinary Service evaluation, notably in the context of assimilating it into the Global Public Good concept, as well as in the context of the 1991 Doha Declaration aimed at facilitating the access of developing and transition countries to the international market in animals and animal products,

The need for the OIE to have Collaborating Centres to support it in the aforementioned areas, including the training of experts responsible for animal health economical surveys and for supporting the evaluation programmes for Veterinary Services in Member Countries that so desire,

The OIE mandate stemming from the Fourth Strategic Plan to improve animal health in the world, by exerting its influence on governments and the international community to invest effectively in implementing animal health and research policies based on OIE standards,

THE INTERNATIONAL COMMITTEE RECOMMENDS THAT
1. The OIE should intensify its actions to help prevent and control animal diseases, including zoonoses, more effectively at the national, regional and global levels, by continually updating appropriate standards and guidelines and using its influence on national policymakers and international development institutions to build the capacity of the Veterinary Services of all its Member Countries;
2. The OIE should continue to support the Member Countries by helping the donor community to guide investment for building the capacity of the Veterinary Services of any Member Country by promoting use of the PVS instrument worldwide;
3. The OIE should use the World Animal Health and Welfare Fund, created by Resolution No. XVII and adopted by the OIE International Committee in May 2004, to make available to its Member Countries economic and financial analysis and methodologies aimed at measuring more accurately the direct and indirect effect of animal diseases and health crises at the national, regional and global levels and for identifying the best means for funding;

4. The OIE should use the World Animal Health and Welfare Fund to support its Member Countries by analysing and promoting a general framework for financing support to a global governance system for animal health. This framework should include the survey of the setting up of a global compensation fund supporting the methods used to control pathogens of animal origin (such as for culling in outbreaks) aimed at encouraging the declaration of outbreaks and facilitating early detection and a rapid response to disease outbreaks;

5. The OIE should use the World Animal Health and Welfare Fund to support its Member Countries to analyse and make the case for insurance and reinsurance systems aimed at reducing the harm suffered by Member Countries and their livestock sectors during health crises;

6. The OIE should call for applications from its Member Countries to establish one or more Collaborating Centre(s) to support it in all the aforementioned areas;

7. The OIE should select and train competent experts, with the support of the Collaborating Centres responsible for training veterinary officials, to support the evaluation and then the promotion of the Veterinary Services of Member Countries that so desire;

8. The OIE should continue its actions for promoting the quality and evaluation of its Member Countries’ Veterinary Services, by regularly updating the standards pertaining thereto, as well as the PVS instrument, whenever necessary calling upon the services of the ad hoc group on the quality of Veterinary Services, which is responsible for reporting to the Specialist Commissions in this field which will make appropriate proposals to the International Committee;

9. Member Countries are invited to include in their national budget the necessary resources to implement the OIE standards.

(Adopted by the International Committee of the OIE on 25 May 2006)

CONSIDERING THAT:

The Sub Commission for Foot and Mouth Disease has instituted the OIE South East Asia Foot and Mouth Disease (SEAFMD) control programme in 1997.

The SEAFMD Programme has so far achieved considerable success in the sub-regional harmonisation of control measures against FMD in South East Asia and is now considered as a model applicable to the harmonisation of control measures against other important animal diseases.

The SEAFMD Programme has been extended and has since January 2006 entered Phase III of its implementation,
The management of the SEAFMD Programme has not yet been entrusted to the Association of South East Asian Nations (ASEAN) as previously envisaged mainly because of the delay in the setting up of the Animal Health Trust Fund by ASEAN countries.

The Permanent Secretariat of the joint Regional FAO/OIE Framework for the Progressive Control of Transboundary Animal Diseases (GF-TADs) for Asia, the Far East and Oceania is located in the OIE Regional Representation in Tokyo, Japan. The GF-TADs Permanent Secretariat will also benefit from financial assistance provided by the Government of Japan and other donors.

The SEAFMD Regional Coordination Unit located in Bangkok (Thailand) will be considered as an OIE Sub regional Representation within Asia, the Far East and Oceania region.

Within the GF-TADs Agreement, OIE and FAO have decided to collaborate closely.

It is imperative to ensure that adequate national and international resources are available to sustain the Programme until the ASEAN Trust Fund is able to meet all expenses involved in its sustainability.

The 12th Meeting of the OIE Sub-Commission for FMD held in Chiang Mai, Thailand, in February/March 2006 has recommended that the OIE International Committee review the composition of the Sub-Commission to also include FAO and key donors.

THE COMMITTEE RESOLVES THAT

The new composition of the Sub-Commission for FMD in South East Asia be constituted as follows:

a) President: to be nominated by the OIE Director General
b) Vice-Presidents: Two Vice-Presidents to be elected among the FMD National Coordinators of Member Countries
c) Members:
   i. Other FMD National Coordinators of Member Countries
   ii. Representative of the FAO to be nominated by the FAO Director General
   iii. The OIE Representative for Asia and the Pacific
   iv. Representative(s) of donors contributing more than USD 150,000 per year to the Programme.

(Adopted by the International Committee of the OIE on 26 May 2006)
Volume 25 (3) of the Scientific and Technical Review contains 25 articles submitted by experts from all parts of the world.

The articles describe different animal disease surveillance strategies and control and eradication of important animal diseases. The economic impact of animal diseases on global trade is also studied, and the epidemiology of different diseases is described in various countries. Veterinary public health organisational models and veterinary diagnostic laboratory quality control are also discussed.

The Review also constitutes a unique vehicle for the publication of reports on the situation of various animal diseases in the world, in particular in countries whose animal health situation receives little or no publicity otherwise.

Vaccination, when available, is undoubtedly the most cost-effective means to prevent and control or even eradicate infectious diseases. In recent years vaccination has also been used for other purposes in animal health and production, such as for immunocastration. In fact the impact of vaccination goes far beyond the simple control of infectious diseases.

Vaccination will therefore help to reach many of the objectives of the 2005 Millennium development goals report, especially in the light of the foreseen livestock revolution.

Public perception and disapproval of some veterinary prophylactic measures, such as mass slaughtering of livestock to control epizootic diseases, also contribute to drive vaccination as an alternative. This will be made easier, thanks to recent progress in veterinary vaccinology, such as the availability of marker vaccines. Attention should be given to the quality and safety of products derived from vaccinated animals related in particular with the effect of excipients (including adjuvants). Moreover science based information should be given to address the consumers acceptance of these products from vaccinated animals.
Moreover vaccines are not always the ultimate solution due to inadequate quality, safety, efficacy, the development of healthy carriers despite vaccination, or due to the evolution of pathogens as exemplified by vaccination against Marek’s disease of poultry.

Vaccination and vaccines have always been a major topic for the World Animal Health Organisation (OIE). Recently, the OIE was involved in the publication by Elsevier of the textbook Veterinary Vaccinology, and organised in Buenos Aires in April 2004 an International Conference on the ‘Control of Infectious Animal Diseases by Vaccination’, the proceedings of which were published by the International Association for Biological Standardization (IABs).

It was timely to review the different aspects of vaccination and vaccines in animal health to provide to the OIE Delegates updated information to scientifically support decision making. This special issue of the OIE Scientific and Technical Review is therefore aiming at providing useful generic information instead of giving detailed technical descriptions of specific diseases or vaccines.

The proceedings of the above seminar will be published shortly in English and French. They cover the speeches made by the various personalities who attended the seminar including the Minister of Agriculture of the Republic of Chad and the OIE Director General.

The various technical presentations made by Veterinary Services, Academia, Breeder associations, Veterinary Statutory Bodies and Livestock breeders are included. The proceedings also include the recommendations adopted during the seminar one of which deals with the prevention and control of avian influenza in Africa.
In a context of political and economic globalisation, the World Organisation for Animal Health (OIE) is constantly developing its actions in the field of world animal health and welfare, international trade in animals and animal products, food safety, and the strengthening of national Veterinary Services.

As a standard-setting organisation, the OIE fully accomplishes its mission with regard to the international community and constantly endeavours to fulfil its duty of transparency and information towards its Member Countries, the veterinary community, interested parties, the international media and the public.

This year the OIE Communication Unit has produced a new brochure, presenting its activities in the Organisation’s three official languages. The new, updated brochure reflects an effective International Organisation endowed with a global vision.

As a source of information on programmes initiated by the OIE, and the OIE’s international partnerships, the brochure clearly illustrates the Organisation’s determination to increase its services to the international community, with the emphasis always on animal health and its beneficial effects on human health and food, poverty alleviation, and animal welfare, throughout the world.

A DVD was also realised containing new OIE presentation films, an interview of the Director General and several fact sheets on the importance of Veterinary Services.
meetings and visits

From June to September 2006

June 2006 (cont.)

Consultation meeting on the research needs of developing countries concerning Highly Pathogenic Avian Influenza
Dr A.B. Niang, Consultant to the OIE Regional Representation for Africa, represented the OIE at the consultation meeting on the research needs of developing countries concerning Highly Pathogenic Avian Influenza, held in Nairobi (Kenya) from 14 to 16 June 2006.

OIE/FAO Joint Mission for Japan/OIE HPAI Special Trust Fund Programme
Dr T. Fujita, OIE Regional Representative for Asia and the Pacific, and Dr S. Yoshimura, Senior Deputy Regional Representative for Asia and the Pacific, represented the OIE at the OIE/FAO Joint Mission for Japan/OIE HPAI Special Trust Fund Programme, held in Thailand, 19-20 June 2006.

Dr S. Yoshimura represented also the OIE at the OIE/FAO Joint Mission for Japan/OIE HPAI Special Trust Fund Programme, held in Yangon (Myanmar), from 21 to 23 June 2006.

Ministerial Meeting to set up a Regional Strategy for the Prevention and Control of Avian Influenza in West Africa
Dr A.B. Niang, Consultant to the OIE Regional Representation for Africa, represented the OIE at the Ministerial Meeting to set up a Regional Strategy for the Prevention and Control of Avian Influenza in West Africa, held in Abuja (Nigeria) from 20 to 23 June 2006.

OIE workshop on the new World Animal Health Information System
Dr D. Chaisemartin, Head, OIE Administrative and Management Systems Department, Dr K. Ben Jebara, Head, OIE Animal Health Information Department and Dr L.O. Barcos, OIE Regional Representative for the Americas, participated in the OIE workshop on the new World Animal Health Information System, held in San Salvador (El Salvador), from 26 to 30 June 2006.

Regional Workshop on contingency planning, compensation and communication for Middle east/North Africa Region
Dr G. Yehia, OIE Regional Representative for the Middle East, represented the OIE at the Regional Workshop on contingency planning, compensation and communication for Middle east/North Africa Region, held in Beirut (Lebanon), 27-28 June 2006.

July 2006

29th session of the Codex Alimentarius Commission (CAC)
Dr W. Droppers, Project Officer, OIE International Trade Department, and Dr F. Berlingieri, Deputy Head, OIE International Trade Department, participated in the 29th session of the Codex Alimentarius Commission (CAC), held in Geneva (Switzerland), from 3 to 7 July 2006.
Participation in the annual meeting of the Codex Alimentarius Commission (CAC) – Bilateral contacts with the WHO – Participation in the Codex working group on antimicrobial resistance

Dr B. Vallat, Director General of the OIE, participated in the annual meeting of the Codex Alimentarius Commission (CAC), had bilateral contacts with the WHO and participated in the Codex working group on antimicrobial resistance. These various meetings all took place in Geneva (Switzerland) on 4 and 5 July 2006.

ALive Research Proposal Development Workshop

Dr A.B. Niang, Consultant to the OIE Regional Representation for Africa, represented the OIE at the ALive workshop on animal health research themes and their implementation. This workshop was held in Nairobi (Kenya) from 4 to 6 July 2006.

Steering Council of the European Technology Platform for Animal Health

Dr Ch. Bruschke, Project Officer, OIE Scientific and Technical Department, participated in the Steering Council of the European Technology Platform for Animal Health, held in Brussels (Belgium), on 6 July 2006.

Special Meeting of the OIE Regional and Sub-Regional Representatives

Dr B. Vallat, Director General of the OIE, Dr J.-L. Angot, OIE Deputy Director-General, Dr D. Sibartie, Head, OIE Regional Activities Department, Dr G. Funes, Deputy Head, OIE Regional Activities Department, Dr A. Dehove, Co-ordinator of the OIE World Fund for Animal Health and Welfare, Dr G. Yehia, OIE Regional Representative for the Middle East, Prof. Dr N.T. Belev, President of the OIE Regional Commission for Europe and Regional Representative for Eastern Europe, Dr T. Fujita, OIE Regional Representative for Asia and the Pacific, Dr Y. Oketani, Deputy Regional Representative for Asia and the Pacific, Dr L.O. Barcos, OIE Regional Representative for the Americas, Dr A. Samba Sidibé, OIE Regional Representative for Africa, Dr B.J. Mtei, OIE Sub-Regional Representative for SADC, Dr R.C. Abila, Regional Coordinator for SEAFMD, Dr S. Forman, SEAFMD Technical adviser and Dr C. Planté, Project Officer, participated in the Special Meeting of the OIE Regional and Sub-Regional Representatives, held at the OIE headquarters in Paris, on 13 July 2006.

WTO Regional Seminar on the SPS Agreement, accompanied by a special training session for OIE trainers

Dr N.T. Belev, OIE Regional Representative for Europe, Dr D. Wilson, OIE Consultant, and Dr V. Bellemain, Director of ENSV, an OIE Collaborating Centre, represented the OIE during a WTO Regional Seminar on the SPS Agreement, accompanied by a special training session for OIE trainers. This seminar took place in Vienna (Austria) from 17 to 21 July 2006.

Official signature of the OIE/FAO/WHO “GLEWS” agreement and the conditions for its implementation – First meeting of the GLEWS Management Committee

Dr B. Vallat, Director General of the OIE, and Dr D. Chaisemartin, Head, OIE Administrative and Management Systems Department, participated in the official signature of the OIE/FAO/WHO “GLEWS” agreement and the conditions for its
implementation, then attended the first meeting of the GLEWS Management Committee. This mission took place in Geneva (Switzerland) on 18 July 2006.

**Meeting with the National Animal Health and Production Investigation Centre (NAHPIC) regarding the control of FMD outbreak in Cambodia**

Dr S. Forman, Technical Advisor SEAFMD Campaign, and Ms N. Hungerford, Communications Officer SEAFMD Campaign, represented the OIE at the meeting to address the outbreak of Foot and Mouth Disease (FMD) in Cambodia, to follow-up on the sero-surveillance survey and to work through the National Framework for FMD Control in Cambodia for 2006-2008. This mission was held in Phnom Penh (Cambodia), on 27-28 July 2006.

**August 2006**

**OIE/CIRAD Regional Training Workshop on Epidemiology, in particular of HPAI and TADs in ASEAN Countries in collaboration with Chulalongkorn University**

Dr T. Fujita, OIE Regional Representative for Asia and the Pacific, represented the OIE at the OIE/CIRAD Regional Training Workshop on Epidemiology, in particular of HPAI and TADs in ASEAN Countries in collaboration with Chulalongkorn University. This mission was held in Bangkok (Thailand), from 31 July to 4 August 2006.
First meeting of the TCP for Avian Influenza for the extended MERCOSUR countries, with the aim of defining the regional development activities

Dr L.O. Barcos, OIE Regional Representative for the Americas, represented the organisation at the first meeting of the TCP for Avian Influenza, for the extended MERCOSUR countries, with the aim of defining the regional development activities, which took place in Buenos Aires (Argentina) on 15 and 16 August 2006.

59th Session of the WHO Regional Committee for South-East Asia

Dr Y. Oketani, Deputy Regional Representative, OIE Regional Representation for Asia and the Pacific, represented the OIE at the 59th Session of the WHO Regional Committee for South-East Asia, held in Dhaka (Bangladesh), from 22 to 25 August 2006.

Demonstration of a poultry culling and disposal system

Dr S. Kahn, Head, OIE International Trade Department, attended a demonstration of a poultry culling and disposal system, held in Brussels (Belgium), on 23 August 2006.

Special Senior Officials Meeting of the 27th ASEAN Ministers on Agriculture and Forestry

Dr T. Fujita, OIE Regional Representative for Asia and the Pacific, represented the OIE at the Special Senior Officials Meeting of the 27th ASEAN Ministers on Agriculture and Forestry, held in Bohol (Philippines), from 29 to 31 August 2006.

September 2006

Participation of the People’s Republic of China in OIE activities

Dr B. Vallat, Director General of the OIE, and Dr J.-L. Angot, OIE Deputy Director General met the Minister Qu Xing and Mr Hu Changchun, the First Secretary at the Embassy of China in France. This meeting was held in Paris (France) on 6 September 2006.

Participation of Brazil in OIE activities

Dr J.-L. Angot, OIE Deputy Director General met Mrs Vera Pedrosa, Ambassador, and Ms Maria Laura Da Rocha, Minister, at the Embassy of Brazil in France. This meeting was held in Paris (France) on 7 September 2006.

Tripartite meeting (OIE Paris, OIE Tokyo, OIE Bangkok) Japan Special Trust Fund (JSTF) on HPAI Control in Asia

Dr A. Dehove, Coordinator of the World Animal Health and Welfare Fund, Dr G. Funes, Deputy Head, OIE Regional Activities Department and Dr T. Fujita, OIE Regional Representative for Asia and the Pacific, participated in the Tripartite meeting (OIE Paris, OIE Tokyo, OIE Bangkok) Japan Special Trust Fund (JSTF) on HPAI Control in Asia, held in Bangkok (Thailand), 7-8 September 2006.

89th Meeting of the IATA Dangerous Goods Board

Dr G. Brückner, Head, OIE Scientific and Technical Department, participated in the 89th Meeting of the IATA Dangerous Goods Board, held in Beijing (People’s Republic of China), from 11 to 13 September 2006.

10th European Conference of Medical and Health Libraries

Ms M. Teissier, Documentalist, participated in the tenth European Conference of Medical and Health Libraries, held in Cluj-Napoca, Transylvania (Romania), from 11 to 16 September 2006.
National Seminars on WTO-SPS Agreement’s application – Starting of STDF 13 Project
Dr G. Funes, Deputy Head, OIE Regional Activities Department, and Dr S. Sidibe, OIE Regional Representative for Africa, participated in the National Seminars on WTO-SPS Agreement’s application – Starting of STDF 13 Project, held in Djibouti, from 17 to 20 September 2006 and in Addis Ababa, Ethiopia, on 21-22 September 2006.

European Forum of Animal Welfare Council
Dr T. Ishibashi, Project Officer, OIE International Trade Department, participated in the European Forum of Animal Welfare Council, held in Berlin (Germany), on 18-19 September 2006.

Mission on the FMD situation in Southern Vietnam
Dr S. Forman, Technical Advisor, OIE SEAFMD Regional Coordination Unit, and Ms N. Hungerford, Communications Officer, SEAFMD Campaign, visited Ho Chi Minh City (Vietnam), from 19 to 21 September 2006 to review the FMD situation in Southern Vietnam.

Meeting with the World Bank and the Vietnam Department of Animal Health (DAH) on PVS Evaluation of the Vietnamese Veterinary Services
Dr S. Forman, Technical Advisor, OIE SEAFMD Regional Coordination Unit, represented the OIE at the meeting with the World Bank and the DAH on PVS Evaluation of the Vietnamese Veterinary Services, held in Hanoi (Vietnam), on 21 September 2006.

The Mongolian State Conference of Veterinarians
Dr T. Fujita, OIE Regional Representative for Asia and the Pacific, represented the OIE at the Mongolian State Conference of Veterinarians, held in Ulaan Baatar (Mongolia), on 21-22 September 2006.

WHO working group on influenza research on the human animal interface
Dr Ch. Bruschke, Project Officer, OIE Scientific and Technical Department, represented the OIE at the WHO working group on influenza research on the human animal interface, held in Geneva (Switzerland), on 21-22 September 2006.
7th International Congress of Veterinary Virology
Ms A. Souyri, Deputy Head, OIE Publications Department, represented the OIE and presented its publications at the 7th International Congress of Veterinary Virology, held in Lisbon (Portugal), from 24 to 27 September 2006.

World Trade Organization (WTO) Public Forum 2006
Dr A. Thiermann, Special Advisor to the Director General of the OIE, participated in the WTO Public Forum 2006, held in Geneva (Switzerland), on 25 September 2006.

22nd Conference of the OIE Regional Commission for Europe
Dr B. Vallat, Director General of the OIE, Dr D. Sibartie, Head, Regional Activities Department, Ms N. Monsalve, Secretary to the Regional Activities Department, Ms C. Hayet, Secretary/translator to the Regional Activities Department, Mrs H. Gevers, Project Officer of the Regional Activities Department, Ms T. Benicasa, Marketing Assistant of the Publications Department and Dr N. Belev, President of the OIE Regional Commission for Europe and OIE Regional Representative for Eastern Europe, took part in the 22nd Conference of the OIE Regional Commission for Europe, which was held in Lyons (France) from 25 to 29 September 2006.

Humane Slaughter Association workshop on humane slaughter and killing of animals for disease control purposes
Dr S. Kahn, Head, OIE International Trade Department, participated in the Humane Slaughter Association workshop on humane slaughter and killing of animals for disease control purposes, held in Bristol (United Kingdom), on 27-28 September 2006.

Second Asia Pacific UN Regional Team Meeting on Avian and Human Influenza
Dr T. Fujita, OIE Regional Representative for Asia and the Pacific, represented the OIE at the 2nd Asia Pacific UN Regional Team Meeting on Avian and Human Influenza, held in Bangkok (Thailand), on 28 September 2006.

OIE Workshop on HPAI Information Systems in Southeast Asia
Dr K. Ben Jebara, Head, OIE Animal Health Information Department, Dr T. Fujita, OIE Regional Representative for Asia and the Pacific and Dr Y. Sakurai, Regional Veterinary Officer, participated in the OIE Workshop on HPAI Information Systems in Southeast Asia, held in Bangkok (Thailand), on 28-29 September 2006.

Meeting with the World Society for the Protection of Animals
Dr S. Kahn, Head, OIE International Trade Department, participated in a meeting with the World Society for the Protection of Animals, held in London (United Kingdom), on 29 September 2006.
The Central Bureau

The Central Bureau, located in Paris, is placed under the authority of the Director General of the OIE, appointed by the International Committee.

In May 2000, during the 68th General Session, Dr Bernard Vallat was appointed Director General for a five year mandate. He began his term of office on 1 January 2001.

The Central Bureau implements and coordinates information, technical cooperation and scientific activities, which the International Committee has decided upon.

Furthermore, the Central Bureau provides the secretariat for the annual General Session of the Committee, meetings of the Commissions and technical meetings organised at the OIE; assistance is also given by the Central Bureau to the secretariat of regional and specialised conferences. Since 1990 it also has a Documentation Centre of a great scientific value.

Regional Activities Department

Arrival and Departure
Dr Gaston Funes assumed his position as Deputy-Head of the Regional Activities Department. He joined us in June 2006 from Argentina where he worked as Epidemiology Director of the SENASA (Official Veterinary Services).

Ms Helga Gevers, Chargée de Mission at the Regional Activities Department, will retire from the OIE in December 2006. Ms Gevers joined the OIE in 1992 coming from the Ministry of Agriculture of the Republic of South Africa. She started her assignment at the OIE as Project Officer working directly under the then Director General Dr Jean Blancou. She has been closely associated with the creation of the Regional activities Department in 2002 and has since that time, in her capacity as “Chargée de Mission”, been actively involved in the various activities of that department. She has contributed immensely in the organisation of regional conferences, seminars, meetings and workshops and in the process has earned the admiration and respect of Delegates and other eminent scientists participating in the activities of the OIE.

The OIE, in particular the Regional Activities Department, acknowledges the significant contribution of Ms Gevers during her stay in the Organisation and wishes her a good retirement.

International Trade Department

New people
On 2 August Dr Sarah Kahn joined the OIE as the new Chief of the International Trade Department. Sarah comes to the OIE from Australia, where she was working most recently as a specialist in International Trade with the Australian Government Department of Agriculture, Fisheries and Forestry. She has previously worked in Rome, the United States, Canada and the United Kingdom. Sarah graduated in Veterinary Medicine from Melbourne University, Australia, in 1978. She worked at several locations in urban and rural Australia before accepting a position as Veterinary Counselor with the Australian Embassy in Washington DC. After her return to Australia in 1993, Sarah obtained a Masters Degree in Science at the University of James Cook, North Queensland. She then worked on a World Trade Organization case involving Australia’s trade measures for the importation of salmon for human consumption. In 2000 Sarah moved to Canada and worked as Deputy Chief Veterinary Officer with the Canadian Food Inspection Agency in Ottawa for four years. At the end of this period she went to Rome and worked with the Animal Health Department of the UN Food and Agriculture Organization, where she worked on avian influenza. Sarah is very pleased to join the OIE as she has a strong interest in international trade. She hopes that her knowledge and practical experience will help the Department to make a strong contribution to the OIE's fulfillment of its mandate in the elaboration of international norms.
OIE news

Dr Cathleen Hanlon is on short-term assignment to OIE from the Centers for Disease Control and Prevention in Atlanta, GA USA. She has been at the CDC for 10 years and is a Veterinary Medical Officer in the Rabies Section. After completing her bachelor degree in Animal Science at Rutgers University, (New Jersey), She obtained her veterinary degree from the University of Pennsylvania (Philadelphia, PA), School of Veterinary Medicine, and her PhD in comparative medicine from the Biomedical graduate group. She was recently Board Certified in Veterinary Preventive Medicine by the American College of Veterinary Preventive Medicine. She has participated in many international scientific conferences and also been an invited consultant and field trainer/investigator in Russia and several Latin American and Asian countries for WHO and PAHO.

Dr Leopoldo Stuardo Escobar, Doctor of Veterinary Medicine, is Chilean and has two children. After being awarded a Masters in Environmental Management by the University of Louvain in Belgium, he worked for five years at Chile’s Agricultural Office to the European Union, based in Brussels, where he took an active part in the negotiations for the Sanitary and Phytosanitary Agreement between Chile and the European Union. Upon his return to Chile, he became an academic in the Faculty of Veterinary and Livestock Science of the University of Chile, after which he worked in the Livestock Protection Division of Chile’s Agriculture and Livestock Service (SAG), where he was responsible for all SAG animal welfare activities and for relations with the European Union. Early this year he was appointed by open competition to the post of Head of the SAG International Affairs Division, where he was working when he accepted the OIE position.

Claudia Campos trained in both communication and translation. After working for several years as a translator, she joined the OIE International Trade Department on 1 August 2006. Claudia is originally from Colombia but lived in France for 12 years.

Meetings

12 years International Laboratory Animal Science (AALAS) annual meeting and OIE / International Council for Laboratory Animal Science (ICLAS) Meeting

Dr Sarah Kahn and Dr Leopoldo Stuardo participated in the American Association of Laboratory Animal Science (AALAS) National Meeting held in the Salt Palace Convention Center, Salt Lake City, UT from 15 to 19 October. Over 1,500 people from research centres, universities, regulatory institutions and industry took part. The meeting included over 200 presentations in the form of seminars, platform sessions, special lectures, workshops and round-table discussions.

Prior to the meeting, the OIE and the International Council for Laboratory Animal Science (ICLAS) held an official meeting on Laboratory Animal Welfare. Member organisations of ICLAS reported on their activities. The OIE and ICLAS agreed to continue working together to explore future opportunities for closer collaboration.

OIE Working Group on Animal Welfare

The OIE Working Group on Animal Welfare held its fifth meeting at the OIE Headquarters in Paris on 4-6 July 2006. During this meeting the Working Group addressed the following major issues:

Discussion was held regarding a draft Resolution on the International Declaration on Animal Welfare.

Updating of four chapters on terrestrial animal welfare which were adopted by the International Committee unamended.

Concerning the development of the chapters on aquatic animal welfare, it was noted that the Working Group has made great progress with the draft documents.

In general, the Working Group considered that the country recommendations for the different guidelines were very helpful to improve the incorporation of outcome-based recommendations rather than prescriptive standards.

In terms of the Working Group strategic plan, the contents of the document entitled, “Issues and Options Regarding Role Clarity and Strategic Direction”, define the future actions of the Working Group.
Concerning Animal production/housing and management, the Working Group agreed to recommend that the Director General begin by creating an ad hoc Group to develop a guidance document that would provide background on relevant issues and suggest a framework for the development of animal production/management guidelines.

Relating to regional involvement in animal welfare issues, it was deemed very important that the Regional Commission participate in the promoting, awareness and adoption of guidelines. Such involvement was supported by the Director General.

Finally, it was discussed and agreed upon to start working on the Second Global Conference on Animal Welfare; time has lapsed since the first conference in 2004 and the need to make a follow-up conference is due.

18-21 July 2006:
**ad hoc Group on identification and traceability of live animals**

The Ad hoc Group was convened at the request of the OIE Animal Production Food Safety Working Group to propose some general principles and definitions for the identification and traceability of live animals. At this third meeting the ad hoc Group finalised its work on the general principles on identification and traceability of live animals (they were adopted in May by the International Committee) and prepared the first draft guidelines for the design and implementation of animal traceability.

8-11 August 2006:
**ad hoc group on the OIE list of aquatic animal diseases and Chapters for mollusc diseases for the Aquatic Animal Health Code**

The ad hoc Group met to address Member Countries’ comments on the previous report of the Aquatic Animal Health Standards Commission and the comments raised at the 74th OIE General Session on the new chapters for mollusc diseases. The ad hoc Group focused on the commodities that can be traded with negligible risk and addressed questions relating to transport water and trade in gametes. It also made progress in the harmonisation of aquatic disease chapters.

The ad hoc Group also addressed the Aquatic Animal Health Standards Commission’s suggestions and assessed some emerging diseases against the OIE criteria for listing diseases, notably abalone viral mortality and infestation with Terebrasabella heterouncinata.

11-13 September 2006:
**ad hoc Group on amphibian diseases**

The ad hoc Group, following the terms of reference prepared by the Aquatic Animal Health Standards Commission, reviewed published scientific information on transmissible diseases in amphibians, with a focus on Ranaviruses and Chytridiomycosis and the evidence for their transmission by international trade. It drafted a questionnaire for submission to Member Countries on import and export trade in live amphibians and related disease occurrence in captive and wild amphibian populations.
OIE news

Scientific and Technical Department

New people

Dr Lea Knopf, previously from the Swiss Federal Veterinary Office in Bern, Switzerland, joined the team of the Scientific and Technical Department in October 2006 to assume responsibility for aspects related to country applications for the official recognition of disease freedom. Dr Knopf has extensive experience of risk-based surveillance systems and animal disease control systems in Western Africa.

Meetings of Commissions and ad hoc Groups

The ad hoc Groups on epidemiology, antimicrobial resistance, evaluation of vaccination strategies for avian influenza, Newcastle disease, tuberculosis, country evaluations for contagious bovine pleuropneumonia, aquatic animal health surveillance, rinderpest, classical and African swine fever and biotechnology, met at the OIE Headquarters. During this period the Scientific Commission for Animal Diseases had two meetings while there was one meeting of the Biological Standards Commission and of the Aquatic Animal Health Standards Commission.

Scientific Commission for Animal Diseases

The Scientific Commission had two meetings - the Bureau of the Commission met from 3 to 4 July 2006 and the full Commission from 19 to 22 September 2006. During the meeting of the Bureau of the Commission, the working program for the next 3 years was finalised and priority issues related to the development or revision of existing international standards for animal diseases were identified.

During the meeting of the Commission in September 2006, the recommendations of the ad hoc Group on Epidemiology for changes to the Terrestrial Code Chapter on foot and mouth disease and draft chapter on bluetongue and bluetongue surveillance guidelines were adopted. The proposed changes to the chapter on foot and mouth disease, relates to the request of the International Committee in Resolution XXX during the 74th General Session of the OIE that the Scientific Commission should review the requirements of the Terrestrial Code to assess if the process for the re-instatement of disease-free status could be expedited. The Commission also expressed the need to develop an appendix for the Terrestrial Code for guidelines on the practical implementation of compartmentalisation and specific guidelines for surveillance for wildlife diseases and vector-borne diseases.

Biological Standards Commission

The Biological Standards Commission met twice in 2006 (from 25 to 27 January and from 13 to 15 September). Over and above the routine work of the Commission (reviewing progress on International standardisation of diagnostic tests and vaccines, reviewing the list of prescribed and alternative tests; examining applications for OIE Reference Laboratory or Collaborating Centre status, examining annual reports of Reference Laboratories and Collaborating Centres, and progressing the next edition of the OIE Manual of Diagnostic Tests and Vaccines for Terrestrial Animals), the Commission also reviewed the reports of the ad hoc Group on Evaluation of Nonstructural Protein (NSP) Tests for Foot and Mouth Disease Diagnosis, the ad hoc Group on antimicrobial resistance, the ad hoc Group on Bovine Spongiform Encephalopathy Tests, the Expert Surveillance Panel on Equine influenza and the ad hoc Group to revise the OIE Guidelines for International Reference Standards for Antibody Assays. The Commission is also overseeing the preparation of a handbook on Veterinary Biosafety Facility Construction.

Special meeting of the Presidents of OIE Specialist Commissions

To enable closer cooperation and collaboration between the Specialist Commissions of the OIE (Scientific Commission for Animal Diseases, Terrestrial Animal Health Standards Commission, Aquatic Animal Health Standards Commission and Biological Standards Commission), the Director General of the OIE, convened an extraordinary meeting on
2 October 2006 at the OIE Headquarters where the Presidents of all four of these Commissions and the Heads of the Scientific and Technical Department and International Trade Department were present. The Terms of Reference of the Commissions were reviewed and a draft document to discuss the working procedures between the Commissions and between the Commissions and the focal Departments in the Central Bureau was discussed. The latter document was adopted outlining future working relationships and the procedures for the appointment of ad hoc Groups and meetings of ad hoc Groups and Specialist Commissions.

Ad hoc Group on Aquatic Animal Health Surveillance
The ad hoc Group met at the OIE Headquarters from 22 to 24 July 2006. The Group reviewed Appendix 3.8.1 of the OIE Terrestrial Animal Health Code on General guidelines for animal health surveillance and adapted them to aquatic animal health surveillance. It also reviewed and updated Chapter 1.1.4 of the Manual of Diagnostic Tests for Aquatic Animals on Requirements for surveillance for international recognition of freedom from infection. The Group initiated a description of steps involved in the design of a surveillance system with the intention of including it in guidelines.

Ad hoc Group on Antimicrobial Resistance
The ad hoc Group met at the OIE Headquarters from 6 to 8 February and from 26 to 28 September 2006. The Group compiled a list of proposed veterinary critically important antimicrobials (VCIA), based on the information supplied by OIE Member Countries. The draft list had been presented to the OIE International Committee during the General Session in May 2006 and had stimulated debate and discussion. A Resolution was adopted that required the Group to further refine the list and consider breaking it down into subcategories according to type of usage. Other areas that the Group considered were the use of antimicrobials in aquatic animals following the recent expert consultation on antimicrobial use in aquaculture and antimicrobial resistance, and the Codex Task Force on Antimicrobial Resistance.

Ad hoc Group on biotechnology
The ad hoc Group met at the OIE headquarters in Paris twice, from 3-5 April 2006 and from 30 to 31 October 2006. During the first meeting three subgroups worked on reproductive animal biotechnologies, on vaccines and nanotechnology. The ad hoc Group also revised the draft chapter from the OIE Terrestrial Manual on Principles of veterinary vaccine production. For the second meeting the objectives of the ad hoc Group were revised to develop guidelines on the animal health risks arising from somatic cell nuclear transfer cloning of production animals, to develop guidelines for new vaccine technologies, to monitor developments on nanotechnology and to advise OIE on suitable procedures for the identification and tracing of animals and animal products resulting from biotechnology interventions. The main focus of the meeting in October was to develop the Guidelines for Somatic Cell Nuclear Transfer in Production Livestock and Horses according to the new terms of reference. An update was given on nanotechnology and the organization of the international symposium Animal Genomics for Animal Health which will take place at OIE headquarters, 23-25 October, 2007.

Ad hoc Group on Tuberculosis
The ad hoc Group met at the OIE Headquarters in Paris, France, from 11 to 13 October 2006. The Group reviewed Chapter 2.3.3 of the Terrestrial Code and took into account the changes in view of new scientific concepts and also took into consideration comments received from Member Countries on the Chapter adopted in May 2005. The proposed Chapter has been expanded to include wood bison (Bison bison and Bison bonasus) and restricted to domestic (permanently captive and owned free-range) bovines and the influence of other domestic and wild mammals on the potential transmission of M. bovis to domestic bovines has been taken into account. The ad hoc Group agreed that there is no need for specific surveillance guidelines on bovine tuberculosis in domestic bovines.
**Ad hoc Group on Epidemiology**
The *ad hoc* Group met at the OIE Headquarters in Paris, France, from 5 to 8 September 2006 with the specific task to discuss the possibilities for amendment of the current requirements of the *Terrestrial Code* for foot and mouth disease for the re-instatement of disease-free status after a limited outbreak of the disease in a free zone or country. This followed the adoption of Resolution XXX at the 74th General Session of the OIE in May 2006 in which the Scientific Commission was given the mandate by the International Committee to proceed with urgency on this matter. The Group made specific recommendations for consideration by the Scientific Commission.

**Ad hoc Group on Newcastle disease**
The *ad hoc* Group met at the OIE Headquarters in Paris, France, from 5 to 6 October 2006. The Group had the important task to review an outdated chapter of the *Terrestrial Code* on Newcastle disease and also to develop specific guidelines for surveillance for Newcastle disease based on the latest scientific information taking into consideration the lessons learned and approach taken in developing a *Terrestrial Code* chapter and surveillance guidelines for avian influenza.

**Ad hoc Group on vaccination strategies for avian influenza**
The *ad hoc* Group met at the OIE Headquarters in Paris, France, from 3 to 4 October 2006 for the second time following the initial meeting in March 2006. The second meeting of the Group was convened to evaluate the OIE information document on AI vaccination distributed to Delegates during the 74th General Session in May 2006 and to use this document as a basis to design a decision-tree to guide Member Countries in their decisions whether or not to apply vaccination for avian influenza. The recommendations of the *ad hoc* Group will be presented for discussion at an OIE/FAO/IZSVe AI conference to be held in Verona, Italy in March 2007.

**Ad hoc Group on the evaluation of country status for contagious bovine pleuropneumonia (CBPP)**
The *ad hoc* Group met at the OIE Headquarters in Paris, France, from 11 to 13 October 2006 to assess the applications of countries for the allocation of freedom from CBPP and also to suggest changes to the current *Terrestrial Code* chapter and surveillance guidelines for CBPP. The Group also revised the existing questionnaire for countries applying for disease freedom to bring the questionnaire on par with the similar questionnaire used for foot and mouth disease and rinderpest.

**Ad hoc Group on bluetongue**
Following the outbreaks of bluetongue since June 2006 within the Northern part of Europe, the Director General of the OIE convened an extraordinary meeting of experts on bluetongue to advise the OIE and especially the Specialist Commissions of the OIE on possible changes that might be necessary to the current provisions of the *Terrestrial Code* and *Terrestrial Manual* in view of the outbreaks. The Group took note of an important new epidemiological finding by the OIE Collaborating Centre in Teramo, Italy, that a European adapted Culicoides specie could be incriminated in the spread of the disease in Europe. The Group suggested minor changes to the *Terrestrial Code* chapter and Manual to accommodate these new epidemiological findings on the disease. Support was also given to the OIE to establish a network between OIE Reference Laboratories for bluetongue.
Ad hoc Group on Classical and African swine fever
The ad hoc Group met at the OIE Headquarters in Paris, France, from 2 to 3 November 2006 to review the surveillance guidelines for classical swine fever in view of the incorporation of the principle of compartmentalisation that was included in the newly adopted Terrestrial Code chapter for classical swine fever and also to develop a new Terrestrial Code chapter and surveillance guidelines for African swine fever following the changes to the chapter on classical swine fever. The process necessitated further suggested changes to the already adopted new chapter and surveillance guidelines for classical swine fever that would be equally applicable to the new chapter and surveillance guidelines developed by the Group for African swine fever.

Ad hoc Group on African horse sickness
The ad hoc Group met at the OIE Headquarters in Paris, France, from 7 to 9 November 2006. The Group revised the current outdated chapter of the Terrestrial Code using the approach taken for the newly developed Terrestrial Code chapter on bluetongue as a reference document and also taking into account the relative importance of wild equidae in the epidemiology of the disease and consequent trade implications in the movement of horses. The Group also commenced in developing specific surveillance guidelines for African horse sickness based on the surveillance guidelines developed for bluetongue.

Ad hoc Group on country evaluations for BSE status of Member Countries
The ad hoc Group met at the OIE Headquarters in Paris, France, from 14 to 16 November 2006. Following the decision of the EU Parliament to discontinue the evaluation of countries trading with the EU in accordance with the GBR index system for BSE and to entrust the sole mandate of country evaluations to the OIE, the Group evaluated the applications of seven countries applying for status evaluation in accordance with the provisions of the 2006 edition of the Terrestrial Code. The applicants included countries that were formally listed as BSE free by the OIE but now had to be assessed in terms of the new categories of the Terrestrial Code.

Ad hoc Group on country evaluations for rinderpest
The ad hoc Group met at the OIE Headquarters in Paris, France, from 21 to 22 November 2006 to assess the applications of 9 OIE Member Countries – the majority of them being from those countries in Africa not yet being listed free from the disease. The Group also had the important task to review the existing Terrestrial Code chapter and surveillance guidelines for the disease and specifically the OIE pathway for achieving freedom from disease in view of perceived changes in the clinical manifestation of the disease.

Communication Unit

New people
Glaïeul Mamaghani joined the Communication Unit of the OIE in May 2006. Trained in media studies and journalism at masters level, Glaïeul built up experience at Reuters International and through different international positions. Most recently she was Communication Officer in Sri Lanka on post-tsunami reconstruction programmes.
The OIE 22nd Regional Conference for Europe was held in Lyons, France from 26 to 29 September 2006 with the support of the “École Nationale des Services Vétérinaires” and the French Ministry of Agriculture.

Birthplace of Veterinary Science, it was befitting that Lyons be chosen to host this very important OIE event: the first veterinary school in the world was founded in this city in 1761. In 1764, a new decree gave the school the title of Royal Veterinary School (the school would subsequently hold the title “Imperial” and then “National” Veterinary School). Its founder, Claude Bourgelat, went on to open another school of veterinary medicine in Alfort, nearby Paris in 1766. Those two schools would later on spawn the first veterinary schools on other continents. Lyons was also designated by UNESCO as a world cultural heritage site in 1998.

The Conference was chaired by Dr Monique Eloit, the OIE Delegate for France and Dr Nikola Belev, President of the OIE Regional Commission for Europe and OIE Regional Representative for Eastern Europe. The representative of the Minister of Agriculture of France, Mr Jean-Marc Bournigal, the President of the OIE International Committee, Dr Barry O’Neil, the Director General of the OIE, Dr Bernard Vallat, Delegates of OIE Member Countries, representatives of international and regional organisations and observers attended the Conference.

A total of 138 participants, comprising OIE Delegates and/or nominees of 45 Member Countries and two Observer Countries and senior officers from 12 regional and international organisations attended the conference. In addition, representatives of the private sector and private veterinary organisations from the host country were present.

Two technical items were discussed during the Conference:
– the illegal smuggling of animals and animal products;
– the role of veterinarians and other stakeholders in the epidemiological surveillance of animal diseases.

These two items are of particular significance considering the current international scene dominated by the occurrence of avian influenza in the world and of other emerging and re-emerging animal diseases such as bluetongue in Europe. A recommendation on each item was adopted by the Conference. The recommendation on smuggling of animals and animal products called for more effective coordination amongst the various agencies such as veterinary, customs, intelligence and police services to combat smuggling of animals, animal products and veterinary medicines. The OIE has also been asked to review the Chapter in the Code relating to the evaluation of Veterinary Services to bring out in particular the link between Veterinary Services and the other agencies involved and also to review the models of proposed international certificates to render them unalterable. The recommendation on epidemiological surveillance asked member Countries to strengthen their networks of surveillance systems to include private practitioners and farmers especially in remote rural areas where veterinary care is less accessible.

A summary of the animal health situation in the various European countries was presented. Useful discussions took place on the recent outbreaks of bluetongue in the continent and the observed changes in the epidemiology of the disease. An update on aquatic animal diseases and the growth of international trade in fishery products was also presented and discussed.
ALive and PACE meetings
Nairobi, Kenya, on 23 and 24 October 2006

The 7th Executive Committee Meeting of ALive1, chaired by Dr Bernard Vallat, OIE Director General, was held in Nairobi, Kenya, on 23 and 24 October 2006.

The Committee reaffirmed its support to the creation of OIE/FAO/IBAR Regional Animal Health Centres, an important priority of these centres being to constitute a pool of experts to participate in the preparation, follow-up and support of national projects in the regions concerned.

It also supported a request to the European Commission to provide 8 million euros to the ALive Programme for the prevention and control of avian and human influenza. This meeting was followed by the ALive General Assembly which was chaired by the Honourable Minister of Agriculture of Mali. The General Assembly endorsed all the recommendations of the Executive Committee including the grant of 8 million euros to the ALive Programme.

Both meetings were followed by the 13th Advisory Committee Meeting (ACM) of the Pan-African Programme for the Control of Epizootics (PACE) to review progress achieved under that programme.

The ACM, which was the last of its kind, expressed satisfaction at the progress achieved by PACE Member Countries in the control of important animal diseases. It noted that rinderpest had virtually disappeared but noted that there was still a possibility that rinderpest virus could be circulating in some parts of the Somali ecosystem. In this respect, it strongly recommended the coordination of a programme to ensure that the disease has indeed been wiped out of the planet.

On the occasions of the ALive and PACE meetings, Dr B. Vallat was awarded medals of merit for the contribution of the OIE in the implementation of the two programmes.

OIE Seminar on capacity building for African national Veterinary Services
Ouagadougou, Burkina Faso, 6-9 November 2006

From 6 to 9 November 2006, a seminar on capacity building for African national Veterinary Services was held in Ouagadougou, Burkina Faso, by the Regional Representation for Africa. It was organised for the Delegates to the OIE of countries of the Regional Economic Communities (IGAD1, ECOWAS2, UEMOA3, CEBEVIRHA4) as well as those of Algeria, Mauritania, Morocco and Tunisia.

Two main items were studied over the course of this seminar:

– information on the PVS tool
– the prevention and control of highly pathogenic avian influenza in Africa.

Both those items were the object of a recommendation adopted during the OIE/ALIVE/FAO Regional Seminar on Animal Health Policies, Evaluation of Veterinary Services and the Role of Livestock Breeders in the Surveillance of Animal Diseases, that was held in N’Djamena, Chad, from 13 to 15 February 2006.

The PVS (Performance, Vision, Strategy) tool was conceived with a view to identifying gaps and weaknesses that can subsequently be remedied through additional national resources and/or international aid. It will also ensure that Veterinary Services are in compliance with the OIE international standards on Veterinary Services mentioned in the Terrestrial Animal Health Code.

The seminar recommended inter alia that the OIE provide technical support for the development of a Reference Laboratory for the diagnosis of highly pathogenic avian influenza in Africa and provide necessary guidelines to African countries to decide on vaccination and other biosecurity measures against the disease.

The seminar was also the first training seminar on the PVS tool to be held outside the OIE headquarters.

1-IGAD: Intergovernmental Authority on Development
2-ECOWAS: Economic Community of West African States
3-UEMOA: Union économique et monétaire ouest-africaine (West African Economic and Monetary Union)
4-CEBEVIRHA: Commission économique du bétail, de la viande et des ressources halieutiques (Economic Commission of Livestock, Meat and Fishery Resources)

1-ALive: Partnership for livestock development, poverty alleviation and sustainable growth
18th Conference of the OIE Regional Commission for the Americas

*Florianopolis, Brazil,*
*from 28 November to 2 December 2006*

The 18th Conference of the OIE Regional Commission for the Americas was in Florianopolis, Brazil, from 28 November to 2 December 2006.

Two technical items were discussed during the Conference:
- mechanisms for farmer compensation
- animal welfare in the Americas.

It is the first time that mechanisms for farmer compensation were discussed at the Regional level in the Americas. This issue is considered crucial for the survival of livestock owners who are often not compensated by the state for the destruction or slaughter of their stock carried out as part of animal disease control programmes.

The second technical item dealing with animal welfare was also of special interest to the region particularly for countries that still need to develop appropriate legislations on the subject. It is recalled that the OIE approaches the subject of animal welfare on a scientific basis and this is often in conflict with animal welfare organisations which are heavily influenced by human emotions.

The Regional Conference was held prior to the First International conference of OIE Reference Laboratories and Collaborating Centers (Official experts from all the OIE Reference Laboratories and Collaborating Centres, Chief Veterinary Officers from the Regional Commission for the Americas, OIE Regional Representatives worldwide, Presidents of all OIE Regional Commissions as well as national scientific and private laboratory experts, were invited to participate in the Conference). The Government of Brazil kindly agreed to sponsor the conference.

First International Conference of OIE Reference Laboratories and Collaborating Centres

*Florianopolis, Brazil*
*from 3 to 5 December 2006*

The main purpose of the First International Conference was to provide a multidisciplinary forum to strengthen scientific cooperation within the network of OIE Reference Laboratories and Collaborating Centres. It also presented the opportunity to launch the new concept of twinning of laboratories. Over 300 experts from 35 different countries participated and contributed to the Conference’s success.
New membership

Cape Verde
The official notification of the accession of the Republic of Cape Verde to the International Agreement of 25 January 1924 for the creation of the Office International des Epizooties was effective on 26 December 2006.

Appointment of permanent Delegates

4 July 2006
Benin
Dr Christophe Boni Monsia
Director of Livestock, Ministry of Agriculture, Livestock and Fisheries

1 August 2006
India
Ms Charusheela Sohoni
Secretary, Department of Animal Husbandry, Dairying and Fisheries

6 August 2006
Vanuatu
Dr Dale Hamilton
CVO, Department of Quarantine and Livestock, Ministry of Agriculture, Forestry and Fisheries

7 August 2006
Libya
Dr Ahmed Abdulla Abubaker
General Director, National Center of the Animal Health and Breeding Improvement

27 August 2006
Sudan
Dr Bashir Taha Mohamed Taha
Undersecretary, Federal Ministry of Animal Resources and Chief Veterinary Officer, Ministry of Animal Resources

30 August 2006
Romania
Dr Stefan Nicolae
General Director, Chief Veterinary Officer, National Sanitary Veterinary Agency, Ministry of Agriculture, Food and Forests

15 September 2006
Japan
Dr Toshiro Kawashima
General Director, International Animal Health Affairs Office, Ministry of Agriculture, Forestry and Fisheries

The official notification of the accession of the Republic of Cape Verde to the International Agreement of 25 January 1924 for the creation of the Office International des Epizooties was effective on 26 December 2006.
New agreements

Framework Cooperation Agreement between the World Animal Health Organisation (OIE) and the Economic Community of West African States (ECOWAS)

The Economic Community of West African States, with headquarters in Abuja, represented by its Executive Secretary, Dr Mohamed Ibn Chambas, hereinafter referred to as “ECOWAS”,

AND

The World Animal Health Organisation (OIE), with headquarters at 12, rue de Prony, 75017, Paris, France, represented by its Director General, Dr Bernard Vallat, hereinafter referred to as “the OIE”,

Noting Decision A/DEC. 4/5/82, relating to the adoption of the protocol on regional agricultural development strategy, adopted by the Heads of State and Government at Cotonou, Benin, and the need to implement it by means of suitable programmes;

Convinced that livestock farming, which is one aspect of this regional agricultural development strategy, plays an essential role in the socio-economic development of the Member States of the Community in so far as it provides a means of fighting poverty for the populations of the said Community engaged in this activity;

Mindful that good animal health is also a source of good health for the said population as consumers of livestock products;

Considering that the objectives of the OIE include, on the one hand, contributing to the eradication of animal diseases of whatever type capable of affecting human populations and, on the other hand, determining animal health standards relating to the animal health status of its Member Countries with regard to priority animal diseases, with a view to international trade in animals and animal products;

Recognising the urgent need to strengthen both the capacities of regional institutions in terms of animal disease research and control at the regional or global level and the regulation of trade in animals and animal products which help to alleviate poverty and improve the quality of life of human populations in West Africa;

Given that the Parties to the present Agreement are mindful of the mutual benefit to be derived from such cooperation;

Hereby agree to the following:

General principles
Article 1
The Parties to the present Agreement hereby decide to create a general framework for collaboration in various fields of activity.

Article 2
The cooperation decided upon by the Parties is aimed at durably strengthening and developing exchanges between them.

Article 3
The present Framework Cooperation Agreement concerns the field of livestock farming, and in particular the field of animal health, including zoonoses.

Forms of cooperation
Article 4
Cooperation between ECOWAS and the OIE may take various forms, including the following areas:

– technical assistance;

– training;

– information and consultations;

– exchanges of good practice in all fields of animal health.

Article 5
The OIE will provide ECOWAS with technical assistance and expertise in the fields of activity defined by mutual agreement.

Article 6
Each Party may participate in training courses, seminars and workshops or meetings organised by the other Party in accordance with pre-established or predetermined conditions.

Article 7
1. ECOWAS and the OIE hereby agree to exchange information and consult each other periodically on all matters of mutual interest relating to:

– epizootic diseases, including zoonoses, and methods used to control them;

– animal health and research standards on the diagnosis, prophylaxis, surveillance and control of priority animal diseases;

– international trade of animals.
2. To this end, the Parties shall regularly inform each other on sector priorities of mutual interest and on the various decisions taken by their respective institutions, and exchange their activity programmes and projects under study likely to be of interest to the Party requesting them.

**Article 8**

The Parties may, in as durable a manner as possible, exchange good practices in livestock farming with a view to strengthening their cooperation.

**Article 9**

Consultations and information of a confidential nature will be the subject of special arrangements or procedures agreed to by the Parties.

**Article 10**

Any cooperation activity within the framework of the present Agreement is to be the subject of a request by one of the Parties, and will require the approval of the other Party.

**Article 11**

The Parties also agree to seek the external funding needed to launch their activities within the framework of the present Cooperation Agreement.

**Other provisions**

**Article 12 Duration – Denunciation of the Agreement**

1. The present Agreement is concluded for an indefinite duration.

2. The Parties nevertheless agree that the Agreement may be denounced, subject to six (6) months’ notice being given. The Party taking the initiative shall inform the other Party by whatever means at its disposal.

**Article 13 Amendments**

The present Agreement may be amended by mutual consent, on condition that the Party proposing the amendment notifies the other Party. Amendments shall take the form of a protocol signed by both Parties and attached to the present Agreement.

**Article 14 Settlement of disputes**

1. Any disputes relating to the implementation of the present Agreement shall be settled amicably between the Parties.

2. In the event of failure to reach an amicable settlement, the dispute will be definitively settled by three (3) adjudicators, one to be designated by each of the Parties and the third to be designated by the two (2) adjudicators already designated by the two (2) Parties.

**Article 15 Entry into force**

The present Agreement shall come into force as soon as it has been signed by the Executive Secretary of ECOWAS and the Director General of the OIE.

In witness whereof, the Executive Secretary of ECOWAS and the Director General of the OIE signed the present Cooperation Agreement.

**Date:** 27 June 2006

Dr Mohamed Ibn Chambas  
Executive Secretary  
Economic Community of West African States (ECOWAS)

Dr Bernard Vallat  
Director General  
World Organisation for Animal Health (OIE)

**Presentation of OIE Honorary Awards**

The Gold Medal was granted to Dr Romano Marabelli for his outstanding services to the OIE and the veterinary world.

Dr Niang delivered a speech in praise of Dr Dennis Alexander and presented him with the Meritorious Service Medal.
India declares itself free from African horse sickness

Information received on 15 September 2006 from
Ms Charusheela Sohoni,
Delegate of India to the OIE,
Department of Animal Husbandry,
Dairying and Fisheries,
Ministry of Agriculture, New Delhi

- African horse sickness (AHS) is a notifiable disease in India.
- The disease has not been reported in India for more than forty years; the last occurrence of AHS was reported in 1965.
- There has been no vaccination against AHS in the country since 1980.
- Production of AHS vaccine in the country was stopped in 1979 and importation of AHS vaccine in the country is not allowed.
- Serological testing of all thoroughbred horses as well as in other species of horses has been carried out as per the testing procedure of the OIE. More than 20,000 equine sera from various agro-geographical areas have been tested for AHS, with negative results.
- Equine animals are regulated and imported through approved Government Quarantine Stations which are situated at the four international airports of Delhi, Kolkata, Mumbai and Chennai. Horses are kept in isolation and undergo various diagnostic tests before they are allowed to be introduced into the various registered studs of the country.
- Importation of livestock into India is regulated through the Livestock Importation Act 1898 (Act 9 of 1898) as amended by the Livestock Importation Amendment Act 2001 (Act 28 of 2001). Importation of horses is allowed from countries that are free from African horse sickness.
activities of reference laboratories & collaborating centres

Activities in 2005

During 2005 there were 157 Reference Laboratories and 17 Collaborating Centres covering 94 diseases or groups of closely related diseases or topics. Annual reports were received from 150 laboratories and 17 centres. Of these, the following numbers were involved in international activities (the percentage values are based on the reports received):

**Reference Laboratories**

<table>

The rearing, care and handling of the various livestock species form an essential part of Mexico’s rural culture. Livestock farmers, domestic animals and the relationship between them and rural families have been throughout history, and still are today, fundamental factors in understanding the idiosyncrasy and identity of rural society. In Mexico, for many of those who devote their lives to it, livestock farming has always bestowed prestige and been associated with the best values of rural life: work, commitment, care and love for animals. This is why livestock farming is so special to all those involved in it, many of whom see it as much more than a means of income and livelihood. For them it is a vocation and a way of life, a culture, an identity.

Food has emerged as a political topic par excellence. It is increasingly involved in controversies at a transnational level, in relation to issues of access, dominance, trade and control in a shared global environment. At the same time, innovations in biotechnology and animal domestication have brought ethics to the forefront of food debates. Thus, we live in an era when the ethics and the politics of food must come together.

This book addresses the ethics and the politics of food from a broad range of academic disciplines, including sociology, philosophy, nutrition, anthropology, ethics, political science and history. The chapters expose novel problem areas, and suggest guidelines for approaching them. Topics range from fundamental issues in philosophy to sustainability, from consumer trust in food to ethical toolkits. Transparency, power and responsibility are key concerns, and special attention is given to animal welfare, emerging technologies in food production and marine domestication. Together, the chapters represent a wide range of academic responses to the fundamental dilemmas posed by food production and food consumption in the contemporary world.
The World Organisation for Animal Health (OIE), in collaboration with the Norwegian Government, organised the first Global Conference on Aquatic Animal Health dedicated to reinforcing the commitment of OIE Member Countries to their rights and obligations regarding disease notification and implementation of OIE standards. Commenting on the event, Dr Bernard Vallat, OIE Director General said: ‘today, over 40% of global fish production for human consumption comes from farming but that poor animal health conditions are one of the major constraints to its further development’. ‘The conference addressed the need to raise awareness and define roles and responsibilities of national veterinary services, other competent authorities, and the private sector in the prevention and control of aquatic animal diseases,’ Dr Vallat added.

The conference, held in Bergen, Norway from 9th to 12th October 2006, established recommendations to create a framework for improved cooperation among stakeholders, to improve global aquatic animal health monitoring and information sharing, and to address aquatic animal health and welfare issues. OIE Member Country Delegates, representatives of national veterinary services, competent authorities and aquaculture producers made up the 150 participants strong conference.

The conference served to underpin the efforts of the OIE and those of the OIE Aquatic Animals Commission, chaired by Dr Eva-Maria Bernoth, in promoting training from the farm level to the veterinary network and authorities’ level in early detection and appropriate rapid response to aquatic animal outbreaks.

It emphasized the need for enhanced information sharing and official notification in the field of aquatic animal health based on the success of WAHIS (OIE World Animal Health Information System) in monitoring and controlling the occurrence and spread of terrestrial animal diseases.

At the conference the OIE provided an update on progress in the elaboration of science-based guidelines on aquatic animal welfare proposed for discussion with OIE Member Countries. These include chapters on slaughter of farmed finfish for human consumption, humane killing of finfish for disease control purposes, transport of finfish by boat and transport of finfish by land. Similar guidelines on terrestrial animals already exist in the OIE Terrestrial Animal Health Code.

The OIE, with the support of the Aquatic Animals Commission, will respond to the outcomes of this first Global Conference on Aquatic Animals and assist in implementing these recommendations using the organisation’s network, including its regional and sub regional offices.
Simulation of an avian influenza occurrence in Peru

Lima, 10-13 July 2006

Introduction
Between 10 and 13 July 2006, the first field and academic simulation of an avian influenza occurrence was conducted in Peru. It formed part of the activities to prepare the health emergency system, under the responsibility of the National Agricultural Health Service (SENASA) with the active participation of poultry producers and associated institutions.

Background
In its Terrestrial Animal Health Code, the World Organisation for Animal Health (OIE) recommends that Member Countries should conduct self-evaluations of various aspects of their Veterinary Services, one of which is the capacity to take emergency measures to control outbreaks of exotic diseases, including zoonoses. In this connection, SENASA staged the event described below.

Objectives
The objectives were to:
– Evaluate the joint response capacity of the official Veterinary Service and of poultry producers (Poultry Health System) to deal with an avian influenza occurrence.
– Consolidate the operational knowledge of sanitary actions for containing and eradicating a possible outbreak of avian influenza.

Participants and speakers
The participants included:
– SENASA personnel
– Professionals from Peru’s poultry industry
– Professionals and technicians from other national institutions, including: the Ministry of Health, the National Institute of Civil Defence, the Ministry of Tourism and Integration, the Ministry of the Interior/National Police of Peru, the Ministry of Defence/Peruvian Armed Forces, and the NGO Grupo de Aves del Peru (Poultry Group of Peru).
– Representatives of the:
  Official Veterinary Services of Chile and Ecuador
  Poultry Producers’ Association of Ecuador (CONAVE)
  Andean Community of Nations
  Pan American Health Organization (PAHO) – Peru.

The following people gave academic presentations:
– Dr Jorge Fuller Catalán, from Chile’s Agriculture and Livestock Service
– Dr José Naranjo, from the Pan American Foot and Mouth Disease Centre of PAHO
– Dr Roberto Acosta Galvez, from SENASA
– Dr Raúl Zegarra Valencia, from SENASA
– Dr Lidia Conza Blanco, from SENASA.
Activities

Two types of activity were carried out:

**Academic activities:** technical talks on avian influenza, Chile’s experience in controlling the 2002 outbreak (Appendix 1), techniques for diagnosing avian influenza, principles for avian influenza surveillance and control, and practical field demonstrations on how to conduct a rapid test for identifying the antigen using immunochromatography and on humane procedures for stamping out animals and destroying carcasses.

**Simulation activities:** epidemiological investigation and outbreak control activities, and systemic management, in response to a simulated notified occurrence, in accordance with the guidelines of the *Manual of Procedures for dealing with an Avian Influenza Occurrence*, in order to validate the guidelines.

As there were two types of activity, the event was organised as follows:

- **Day 1:** 09.00 hrs to 17.00 hrs – Technical talks
- **Days 2 and 3:** 08.00 hrs to 14.00 hrs – Simulation of an occurrence
  14.00 hrs to 15.30 hrs – Practical field exercises
- **Day 4:** 09.00 hrs to 13.00 hrs – Summaries, analysis, final report and closing.

Results

The **academic activities** met with expectations and successfully attained the objective of training SENASA staff and private veterinary professionals who form the operational human resource component of the avian influenza emergency system (Fig. 1).

The **simulation activities** achieved the following results:

- The outbreaks scripted in the simulation exercise were identified and quarantined.
- Visits were made to 14 farms during the epidemiological investigation activities (33% of farms in the zone).
- Three cockfighting arenas were inspected.
- Visits were made to 65 backyard farms.
- Nine control posts were established.
- A total of 98,473 birds were slaughtered.
- Exports of poultry and poultry products were suspended.
- An Emergency Directorate was set up at central level in response to the health emergency.
- The presence of avian influenza type A virus was detected by means of a rapid field diagnosis using immunochromatography.
- Serological diagnoses detected the presence of avian influenza type A virus using ELISA and agar gel immunodiffusion, and antibodies to the H5 virus were detected using haemagglutination inhibition.

Conclusions

- The activities proposed and carried out during the Simulation of an Avian Influenza Occurrence were used to assess the response capacity of Peru’s Poultry
Health System in terms of logistics, material resources, equipment, procedural manuals, regulations and, most important of all, human resources.

– The academic training sessions held in parallel were useful in consolidating practical knowledge of applying sanitary measures.
– Documentation and reference material were created which will be useful in staging future simulation activities in other areas of Peru, with special interest in bi-national cross-border participation with Ecuador, and tri-national participation with Bolivia and Chile.
– Health cooperation relations between Peru, Ecuador and Chile were strengthened.

Recommendations
The following actions were recommended based on observations and interpretations of the events:

– To provide operational clarifications on the activities described in the Manual of Procedures for dealing with an Avian Influenza Occurrence.
– To provide operational clarifications for poultry producers in emergencies.
– To devise and issue rules for the central level on actions to ensure management of an emergency, including technical, legal, financial and administrative aspects.
– To ensure that all the material resources and equipment proposed in the emergency response modules are available and to improve the terms of reference for work inputs, including the provision of a lightweight generating set for each module, amongst other things.
– To step up coordination activities with the official Veterinary Services of neighbouring countries in order to schedule two strategic simulation exercises in the next 12 months, at bi-national cross-border level with Ecuador and at tri-national level with Bolivia and Chile.
### January

**33rd Annual Conference of the International Embryo Transfer Society**
- **7-9 January**
- Kyoto (Japan)

**SPS Committee (Agreement on Sanitary and Phytosanitary Measures)**
- **7-9 March**
- Geneva (Switzerland)

### February

**2007**
questions and answers

question

What is the OIE doing to improve animal welfare standards globally?

answer:

The OIE has taken a leadership role globally in developing guidelines for animal welfare. At its 73rd General Session, in May 2005, the International Committee of OIE Member Countries adopted four guidelines for inclusion in the OIE Terrestrial Animal Health Code.

The guidelines on Animal Welfare are in Section 3.7 of the Terrestrial Animal Health Code – 2006, which contains six appendices on animal welfare, as follows:

- Appendix 3.7.2.: Guidelines for the transport of Animals by Sea (http://www.oie.int/eng/normes/mcode/en_chapitre_3.7.2.htm)
- Appendix 3.7.3.: Guidelines for the transport of Animals by Land (http://www.oie.int/eng/normes/mcode/en_chapitre_3.7.3.htm)
- Appendix 3.7.4.: Guidelines for the transport of Animals by Air (http://www.oie.int/eng/normes/mcode/en_chapitre_3.7.4.htm)
- Appendix 3.7.5.: Guidelines for the Slaughter of Animals (http://www.oie.int/eng/normes/mcode/en_chapitre_3.7.5.htm)
- Appendix 3.7.6.: Guidelines for the Killing of Animals for Disease Control Purposes (http://www.oie.int/eng/normes/mcode/en_chapitre_3.7.6.htm)

The OIE is constantly refining and developing new guidance to meet its mandate as set by 167 Member Countries. In 2006-2007, the OIE will also work on the development of guidelines for animal housing/production systems. This is on the work program, as indicated in the report of the OIE’s Permanent Animal Welfare Working Group in September 2005 (http://oie_nt3/eng/bien_etre/WG_sept2005_report.pdf). Once the Working Group has finalized its technical input, the new guidelines will be presented at the General Session, held in May each year, for adoption by the International Committee.

It is not mandatory for countries to implement OIE standards. Each Member Country is responsible for developing and implementing its own animal welfare legislation, but they are committed, as OIE Member Countries, to using OIE standards as a basis and a reference. In the case of developing countries, the OIE works to help these countries to implement standards.

For further information on OIE’s activities on Animal Welfare, please visit the OIE internet home page at http://oie_nt3/eng/bien_etre/en_introduction.htm.
