Epidemiology

Epidemiological comments

The status of farms/premises within the movement restriction zones was confirmed by local laboratory (Kumamoto Livestock Hygiene Centre), according to the national guideline. Susceptible animals (birds) in the farms/premises within the movement restriction zones were tested by ELISA and were subject to virus isolation test. On 17 April 2014, results of confirmation tests of all the farms/premises within the movement restriction zones became available and the farms/premises were proved to be free from avian influenza virus. Movement restrictions (3km radius around the affected farm and the related farm) and shipping restrictions (3-10km radius around the affected farm and the related farm) are still in the act.
