### Epidemiology

#### Epidemiological comments

Japan declares freedom from avian influenza with effect from 17 July 2014 according to the Article 10.4.3. of the OIE Terrestrial Animal Health Code. As specified in the Article 10.4.3., a stamping-out policy, including the destruction of all susceptible animals and the disinfection of the affected farm and the related farm, was applied and all the control measures were completed on 16 April 2014. Active surveillance with the confirmation tests to prove freedom from avian influenza were conducted by clinical inspection, serum antibody test and virus isolation, and the three-month period has passed since the application of a stamping-out policy, without any new outbreaks.

#### Source of the outbreak(s) or origin of infection

• Unknown or inconclusive
