Epidemiology

Epidemiological comments

The HPAI H7N9 event in Tennessee is now final, closed, and resolved.

The last positive detection of HPAI H7N9 in poultry was made on March 15, 2017. In addition to having no further HPAI detections, the state of Tennessee has met the following:

- Mandatory surveillance in the State and control areas has been completed with negative results for HPAI. As a precaution, additional enhanced surveillance and procedures may continue in the State and area.
- Depopulation of all infected premises has been completed and appropriate disposal was completed.
- Cleaning and disinfection of the infected premises (including but not limited to, outside areas, equipment, trucks, and other fomites).
- No HPAI detections through wild bird surveillance have been made within the past 3 months.

The USDA Animal and Plant Health Inspection Service (APHIS), Departments of Wildlife, and the Tennessee Department of Agriculture, continue to conduct thorough surveillance for avian influenza virus. All surveillance samples have tested negative for avian influenza. No HPAI has been detected in over 3 months.

The HPAI event in the United States is considered CLOSED. In accordance with the World Organisation for Animal Health (OIE) Terrestrial Animal Health Code Chapter 10.4 (Articles 10.4.3 and 10.4.4), the United States has completely fulfilled the necessary actions and surveillance requirements to again self-declare itself free from HPAI.

Source of the outbreak(s) or origin of infection
