### Epidemiology

#### Epidemiological comments

Following the epidemiological surveillance activities on notifiable avian influenza within the national poultry farming and in poultry for import, low pathogenic avian influenza subtype H7N3 virus has been identified in a lot of monk parakeets (*Myiopsitta M. monachus*) imported from South America, using virus identification test, virus isolation, intracerebral pathogenicity index (ICPI) and gene sequencing. Birds have been quarantined and depopulation, washing, cleaning and disinfection activities as well as the introduction of sentinel birds have been implemented in the affected production unit.

#### Source of the outbreak(s) or origin of infection

- Legal movement of animals
