Outbreak summary: Total outbreaks = 1 (Submitted)

Species	Susceptible	Cases	Deaths	Killed and disposed of	Slaughtered
Equidae	64	1	0	1	0

Epidemiology

Epidemiological comments

The 13-years-old, clinically healthy, horse has been detected in the frame of self-control measures.

It has been imported to Switzerland in 2014 with a passport issued in Belgium.

The horse has been euthanized and sampled for further investigations, after the positive Coggin's test of July 7th following official sampling. The remaining horses of the holding all tested negative on private sampling; the results of the official testing are pending.

Source of the outbreak(s) or origin of infection

• Unknown or inconclusive

Measures applied

Applied	To be applied
<ul style="list-style-type: none"> • movement control inside the country • surveillance within containment and/or protection zone • quarantine • official disposal of carcasses, by-products and waste • selective killing and disposal • zoning 	<ul style="list-style-type: none"> • traceability • disinfection
Animals treated	Vaccination Prohibited
No	Yes

Diagnostic test results

Laboratory Type	Name of Laboratory	Species	Test Type	Date results provided	Result
National laboratory	Institute for virology and immunology IVI, Bern	Equidae		07/07/2017	Positive

Future Reporting

The event is continuing. Weekly follow-up reports will be submitted.
